§ 1

Cover & Executive Summary

Pratik × BARSS Ops — Launch Brattle Portfolio

A Haitian hybrid social enterprise. Steward-owned. Perpetual. Executing a modernized Konbit at metro scale.

> ***Mission, one sentence:*** *Dan Tillias and Wesley Bertil form a perpetual Delaware LLC that saves Haiti.*

Document	Launch Brattle Portfolio, Section 1 of 9
Date	April 16, 2026
Prepared by	BARSS LLC (Wesley Bertil) + Impact 480 LLC (Daniel Tillias)
Vehicle	Pratik × BARSS Ops JV, perpetual Delaware LLC, steward-owned, reciprocal cross-guaranty
Geography	Cap-Haïtien metro (Nord) + Limonade (SOIL plot) + Cité Soleil (SAKALA sites)
Status	Phase 0 launch, bridge capital window open

1.1 The Phase 0 Frame (load-bearing)

The core story of this document is Phase 0. The first 36 months. Executed by Dan and Wesley personally, with no infrastructure capital, no hired management layer, no waiting.

All four pillars ignite in Year 1. Even if barely. A 0.5-hectare bamboo starter plot at SOIL Limonade. Two to three biochar kilns in rotation. Forty SAKALA youth running the first trash routes. One hundred vendors carrying the first Plakèt cards. Three hundred captive payroll users (SAKALA + SOIL + HELP + Pratik + Konbit Lapen staff) cycling value through the system from Day 1.

Nothing waits for capital. Nothing waits for a grant cycle. Nothing waits for a board.

Phase 0 is the proof. Phase 0 earns the right to deploy infrastructure capital. At Year 3 the proof unlocks the DEFINITIVE Phase 1 stack… $10-15M from IFC, IDB Invest, and the Canada Blended Climate Finance facility… and that capital hits a system that has already been running for three years with documented unit economics, documented captive demand, documented survival through the worst operating environment in the Western Hemisphere.

This is a two-person bootstrap that earns the right to build metro-scale infrastructure. Read every section of this portfolio through that lens. The numbers are real, the pillars are real, the captive coalition is real, and the 20-year trajectory is real… but only because Year 1 through Year 3 is a hand-operation by two named humans who have committed their lives to each other and to the work.

1.2 Executive Summary

WHAT WE ARE

A hybrid social enterprise. Perpetual Delaware LLC. Steward-owned. Four names for four audiences…

AUDIENCE	NAME
Haitian community	**Konbit** (modernized, metro scale, perpetual)
Impact investors	**Steward-owned enterprise** (Purpose/Patagonia lineage)
US legal/tax counsel	**Public Benefit LLC** (Delaware, perpetual, cross-guaranty)
Foundations and DFIs	**Hybrid social enterprise** (revenue + mission, blended capital)

One vehicle. One set of books. Four framings, each accurate, each deployed where it lands.

WHAT WE DO

Four operating pillars. All four ignite in Phase 0.

1. **Trash Collection.** Metro-scale household and commercial waste routing in Cap-Haïtien, leveraging SAKALA youth as the operating workforce and Pratik's existing waste-sector relationships as the commercial backbone.
2. **Reforestation.** Bamboo and native-species agroforestry on the SOIL Limonade plot, starting at 0.5 ha, scaling to a regional nursery + outplanting pipeline tied directly to Pillar 3.
3. **Charcoal Alternatives.** Biochar and briquette production from Pillar 1 organic waste and Pillar 2 bamboo thinnings. Substitution target: the Cap-Haïtien metro charcoal market… currently the single largest driver of Nord deforestation.
4. **Plakèt.** A closed-loop community payment card. Captive payroll for the anchor coalition (300-400 users Day 1), vendor network in the metro, circular value retention inside the cooperative economy.

Each pillar feeds the others. Trash feeds Charcoal. Charcoal pays Reforestation. Reforestation feeds Trash routes. Plakèt captures the wages and recirculates them. See §3 for the flywheel diagram.

HOW IT IS DIFFERENT

Three things make this vehicle structurally distinct from conventional Haiti development entities…

- **Fractal sub-trust architecture.** Every endeavor spins up its own gold-backed charitable sub-trust under the **Fon Kominote SAKALA** master trust (filed, Delaware irrevocable charitable). Not one pooled fund with governance fights. A tree of purpose-specific trusts, each with its own named beneficiary cohort, each independently auditable. See §5.
- **Dual Theta inversion in the paperwork, not the prose.** The extraction math that defines the Haitian political economy ($\Theta \approx 0.80$ elite capture in direct regimes, $\Theta \approx 0.45$ in crisis regimes) is inverted inside the operating agreement itself. Capture rates flip toward the workforce and the land. No marketing language about it. The cap table does the work.
- **Captive customer coalition from Day 1.** The vehicle launches with a committed user base of 300-400 captive payroll users across five anchor organizations. Revenue is not hypothetical. Demand does not need to be manufactured. See §4.

THE PHASE 0 ASK

$50-75K bridge. Covers 36 months of hand-operation across all four pillars. Underwrites the 0.5 ha bamboo starter, the first two to three kilns, the Plakèt card issuance and vendor onboarding, the first SAKALA trash-route cohort, and the legal + accounting stack for the JV and the master trust.

What it ignites at Year 3: $10-15M DEFINITIVE Phase 1 infrastructure stack. 200x leverage. See §6.

1.3 Numbers at a Glance

METRIC	VALUE
Phase 0 duration	36 months
Phase 0 bridge capital required	**$50-75K**
Y1 captive payroll users (Day 1)	300-400
Y1 youth engaged (SAKALA cohort)	40
Y1 bamboo starter plot (SOIL Limonade)	0.5 ha
Y1 biochar kilns (rotating)	2-3
Y1 Plakèt vendor network	~100 vendors
Break-even	Month 9-12
Y5 projected revenue	**$8.58M**
Y5 projected EBITDA	**$4.67M (54% margin)**
Year 3 DEFINITIVE Phase 1 unlock	**$10-15M** (IFC + IDB Invest + Canada BCF)
Full-build 20-year trajectory	**$128-208M** integrated Cap-Haïtien infrastructure
Fon Kominote SAKALA master trust	**Filed** (Delaware irrevocable charitable)
Pillars operational by end of Y1	**4 of 4**

See §6 for the full financial model, §7 for the IFC/IDB Invest structure, §8 for the 20-year trajectory tied back to the Haiti Master 20-Year Playbook.

1.4 The Captive Coalition (preview)

Day-1 captive payroll users are already committed across five organizations operating in Cap-Haïtien metro and Cité Soleil. Full breakdown in §4...

ORGANIZATION	ROLE	EST. DAY-1 PAYROLL USERS
SAKALA	Youth workforce + primary community anchor (Cité Soleil)	~40 youth + ~15 staff
SOIL	Land partner (Limonade plot) + sanitation integration	~30-50 field staff
HELP	Education pipeline + scholar workforce	~40-60 scholars
Pratik	Waste-sector operational backbone	~50-80 operators
Konbit Lapen	Community enterprise integration	~20-40 members
Total		**300-400 users**

This is not projected demand. These are existing payrolls being rerouted through Plakèt on Day 1, with the JV taking float and rebate economics from the cycle.

1.5 What This Document Is (and Isn't)

This portfolio IS... - The canonical external-facing launch document for the Pratik × BARSS Ops JV. - The first thing funders, strategic partners, and evaluators should read before any call, meeting, or due-diligence session. - A nine-section Brattle portfolio, embeddable in a single-page HTML viewer, navigable by audience.

This portfolio IS NOT… - A comprehensive operational manual. Play-level SOPs live in `Operations/Plays/01-04/`. - The financial model. Full model with assumptions lives separately and is shared under NDA. - The legal contract stack. The JV operating agreement, the cross-guaranty, the steward-ownership clauses, and the master trust instrument are a separate paperwork stack shared with counsel only. - A SAKALA document. SAKALA is an anchor partner and workforce source. SAKALA is not the JV. Firewalls are explicit in §5. Harvest Box remains a SAKALA product and is out of scope for this vehicle.

1.6 Portfolio Navigation

Nine sections. Each is a self-contained document for a different audience. Read in order, or skip to the section that matches the conversation you are having.

§	SECTION	ONE-LINE SCOPE	PRIMARY AUDIENCE
§1	Cover + Executive Summary	You are here. The frame and the headline numbers.	All
§2	Phase 0 Operational Plan	The 36-month hand-operation across all four pillars.	Funders, operators
§3	The Four Pillars + Flywheel	How Trash, Reforestation, Charcoal, and Plakèt feed each other.	Strategic partners
§4	The Captive Coalition	The 300-400 Day-1 users and the anchor organizations.	DFIs, evaluators
§5	Legal + Trust Architecture	Delaware PBLLC, cross-guaranty, Fon Kominote SAKALA, fractal sub-trusts.	Counsel, tax, compliance
§6	Financial Model + Unit Economics	Y1-Y5 revenue, EBITDA, break-even, Phase 1 unlock.	Impact investors, DFI underwriters
§7	Investor Variant (DFI / IFC / IDB Invest)	The blended-capital structure for the $10-15M Year 3 raise.	IFC, IDB Invest, Canada BCF
§8	Community Variant + 20-Year Trajectory	The Konbit frame, tied back to the Haiti Master 20-Year Playbook.	Haitian community, diaspora
§9	Appendices + Source Trail	Research, references, paperwork index, contact stack.	All

Sections 7 and 8 are audience-specific variants of the same truth. Same vehicle. Same numbers. Different framing for different rooms.

Diagnosis & Architecture

Section 2 — The Diagnosis & The Architecture

> ***Framing rule (load-bearing):*** *Every architectural claim in this section connects to what Dan Tillias and Wesley Bertil will execute in Phase 0... the first 36 months, 2 founders, 4 pillars ignited simultaneously. The architecture is not theoretical scaffolding. It is the legal and economic chassis that a 2-person team will operate from Month 1 with $50-75K bridge capital. If an element cannot survive 2 founders bootstrapping, it does not belong in Phase 0. If it cannot scale into Phase 1 without being torn up and rebuilt, it does not belong in Phase 0 either. Everything below passes both tests.*

2.1 The Diagnosis — Why Haiti Loses Value

The EEDTM framework... Elite Extraction with Differential Targeting Model... is the measurement system this portfolio is built on. It is not a metaphor. It is an empirical model validated across 20 cases, 200 years, 4 continents, and it converges on three constants that predict how value flows out of targeted populations regardless of the century or the mechanism.

THE THREE CONSTANTS

Theta (Θ) — elite capture rate, approximately 0.80. Across every case file BARSS has built, from Haiti 1825 to the subprime crisis to Tulsa 1921 to Liberia maritime to Gary Indiana to convict leasing, elites capture roughly 80% of the extracted value. The remaining 20% is absorbed by operational overhead, enforcement costs, and the subsistence floor that keeps the extracted population alive enough to keep extracting from. Three independent derivations converge on this value: the Tullock contest model from game theory (n=5 oligopolistic extractors yields exactly 0.80), Gruber and Saez 2002 public finance (revenue-maximizing flat tax = 80% with no allowances), and the principal-agent subsistence-floor argument (population needs ~15-20% to survive).

Phi (Φ) — upstream constant, 0.40. The financier's cut. 500 years of syndicate finance... Oosterlinck's Haiti 1825 archival data, the Laffitte succession, the Baring to ING lineage, Rothschild's 1825 commission, the 2008 TARP syndicate... all point to the same 40% upstream margin. Phi and Theta are separate layers. Operational extractors take Theta. Upstream financiers take Phi of what flows through the syndicate structure above them.

Gamma (Γ) — differential targeting ratio, variable. This is where racism functions as extraction technology, not as sentiment. Gamma modulates legal status, credit access, enforcement pressure, and asset seizure to multiply extraction from the targeted subpopulation. Haiti 1825 Gamma = ~6,500x. US subprime Gamma = 3.2x. The variability is the point: Gamma is a tunable parameter on the same machine.

THE DUAL THETA REGIME

REGIME	THETA	DESTRUCTION	MECHANISM EXAMPLES
Direct extraction	0.85	15%	Colonial indemnity, labor coercion, industrial monopoly, convict leasing
Crisis extraction	0.45	55%	Foreclosure, disaster-debt, famine, gang-era kidnap economy

Elites prefer direct extraction. Crisis is second-best. When direct is legally blocked, elites shift mechanisms rather than surrender the capture rate... this is the Resistance Ratchet, and it is why a century of well-intentioned reform legislation has a track record of failing to reduce total extraction. Direct extraction produces rich elites and surviving populations. Crisis extraction produces less-rich elites and devastated populations. The math is the same machine running in two modes.

HAITI, SPECIFICALLY

The Haiti case file is where Theta, Phi, and Gamma were first measured together:

- **1825 Double Heist.** Combined Theta ≈ 1.01. The only documented case exceeding 100%. France levied indemnity on assets it no longer owned (plantations already confiscated in the revolution), Rothschild financed it at 6% with 40% Phi syndicate take, Laffitte ran the succession, and Haitians were charged interest on the seizure of their own freedom for 122 years (1825-1947). Present-value damages: $100-170B.

- **1914 Gold Seizure.** USS Machias, December 17 1914, Marines lifted $500,000 in gold from the BNRH vault and transferred it to National City Bank of New York. Never litigated. SDNY jurisdiction. Armed-robbery facts. Present value $2.1-2.8B. This is the strongest open claim in the Haiti portfolio and a named defendant is still trading under the Citigroup ticker.
- **Ongoing gang-era extraction.** Surin 2026 (Groupe Sogebank) produced a 98-month autoregressive violence series. Persistence coefficients: ρ = 0.95 for homicides, ρ = 0.80 for kidnappings, ρ = 0.57 for armed clashes. Those numbers describe a crisis-regime extraction economy (Θ = 0.45, destruction = 0.55) with a BAM BAM syndicate at the top (Bigio, Apaid, Mevs, Brandt, Acra, Madsen), Sogener-Vorbe motive forensic-grade at $174M PetroCaribe, CTU Miami operating as Silvercorp v2, and an offshore custody layer running through Alcogal, Othmane Naim's Privexia SA in Geneva, and Edmond de Rothschild Europe.

THE 2026 FLOW LAYER

EEDTM is not ancient history. Extraction is visible on the balance sheet of any Haitian household right now:

- **HTG depreciation, 107% cumulative, 2018-2026.** A worker paid in gourdes on the first of the month who cannot immediately convert to USD, hard assets, or storable goods loses purchasing power every day they hold the currency. This is an invisible Theta running against every unbanked wage in the country.
- **Merchant cash-acceptance gap.** Approximately 80% of Haitian adults are unbanked (CGAP 2024). Most commerce is cash-only. No audit trail, no credit-building, no insurance, no dispute resolution. Every cash transaction is a point at which value can be intercepted, extorted, or taxed informally.
- **ATM-withdrawal violence pattern.** The first of the month is a choreographed event that extortion networks track. Workers known to carry a month's wages in gourdes on a predictable day become predictable targets. This is crisis-regime Gamma operating at the street level.
- **Diaspora remittance fee extraction.** ~$4 billion/year US-to-Haiti remittance corridor × 4-6% blended fee (WU, MoneyGram, bank wire) = $160-250M/yr leaving the corridor into upstream financiers. That is Phi of the remittance flow. It is, to be precise, the exact structural role that Rothschild's 1825 syndicate played, updated with newer branding.

THE FRAME THIS PORTFOLIO OPERATES FROM

This is not a Haiti-failure story. It is an extraction-architecture story in which Haiti has been the object. The mathematics predict that any cooperative infrastructure project dropped into Haiti without structural protection against Theta, Phi, and Gamma will be captured within one generation, because that is what the machine does. The architecture described below is the answer to that diagnosis… not philosophically, but structurally.

2.2 The Structural Alternative

Cooperative infrastructure is the structural opposite of extraction. Not the political opposite. Not the moral opposite. The structural opposite. The mathematics flip.

Under extraction, Theta flows outward: value produced by Haitian labor, Haitian waste streams, and Haitian coastal geography is captured upstream at 0.80 and leaves the country. Under a properly-configured cooperative, three mechanisms invert each of the three constants:

PATRONAGE DIVIDENDS INVERT THETA

Subchapter T of the US Internal Revenue Code obligates a cooperative to return surplus to its member-patrons in proportion to their patronage. It is not a preference, it is a legal requirement for the cooperative to retain its Subchapter T tax treatment. Once a surplus is legally pre-committed to the people who generated it, it cannot be captured upstream without breaching fiduciary duty and losing the tax election. REI runs this at scale in the United States. The mechanism is proven. What has not been done at scale is stacking it across waste, transit, energy, and food simultaneously inside a single Haitian metro.

WORKER OWNERSHIP CLOSES GAMMA

Differential targeting requires a legal distinction between the extracting group and the extracted group. When the workers are the owners, the distinction collapses by definition. You cannot run Gamma on yourself. A worker-owned cooperative that holds its own tax liability, its own real-property title, and its own credit line is not targetable in the way a wage-labor workforce is. The membership layer is the shield.

CLOSED-LOOP WASTE-TO-VALUE DESTROYS PHI

The upstream financier's cut requires an upstream creditor. When organic waste leaving SAKALA becomes compost feeding the bamboo nursery feeding the construction supply feeding the housing built for the waste workers, there is no upstream. The loop has no external creditor. Phi goes to zero because the syndicate layer has nowhere to attach itself. Capital comes in once to start the loop and is retired as the loop self-finances.

WHY ALL THREE TOGETHER IS NON-NEGOTIABLE

Patronage dividends alone still leak to upstream financiers (Phi captures the input supply chain). Worker ownership alone still exports surplus to input suppliers. Closed-loop waste alone still gets Gamma'd by the state through regulatory capture. All three together, operating on the same membership base, inside the same metro footprint, cross-collateralized at the sub-trust level, is the configuration where the extraction math cannot find purchase. This is what the BARSS house voice calls "the three-legged stool" and it is the structural design constraint every element of the Pratik × BARSS Ops architecture must satisfy.

2.3 What We Are Structurally — Four Audience-Appropriate Names

The JV operates under different names for different audiences. This is not marketing drift. Each name is technically accurate for the audience that uses it, and the technical accuracy matters because each audience has different legal and fiduciary tests to run.

AUDIENCE	NAME	WHAT IT MEANS TO THEM
Legal / accounting / IRS	**Hybrid Social Enterprise**	Delaware LLC + Delaware irrevocable charitable trust stack, with operating entities running Subchapter T patronage dividends and a shared charitable trust umbrella for surplus capture
Mission investors / family offices	**Steward-Owned Enterprise**	Patagonia 2022 (Chouinard's $3B transfer to Holdfast + Patagonia Purpose Trust) and Bosch 1964 (Bosch Stiftung holds 92% of Robert Bosch GmbH voting shares) are the structural analogs. Ownership committed to mission, not to exit
Delaware regulators / public benefit filings	**Public Benefit LLC**	Delaware's Public Benefit LLC Act (6 Del. C. § 18-1201 et seq.) formalizes the stated public benefit purpose and the biennial benefit report. The JV files under this elective status
Haiti community / cultural	**Konbit at municipal scale, formalized**	Konbit is the Haitian rural-labor reciprocity tradition (farmers pooling labor for each other's harvests). This is that tradition scaled from one field to one metro, with the paperwork that survives 20 years of political turnover

All four are true at once. A family-office LP hearing "Steward-Owned Enterprise" and a Haitian farmer hearing "Konbit formalized" are looking at the same legal structure from different angles. The four names make the structure legible to the four different audiences who each control a different gate.

2.4 Fractal Konbit Architecture

> *Source:* `11. Strats/Projects/Pratik_X_BARSS_Ops/Operations/Plays/04_Plaket/Research/05_Plaket_Payroll_and_Fractal_Gold_Trust_Architecture.md` *§6-7. This subsection is a Phase-0-appropriate summary of the full architecture doc. See §4 for the financial flow implications and §3 for how each pillar maps onto a specific sub-trust.*

MASTER TRUST

Fon Kominote SAKALA. Delaware irrevocable charitable trust, filed. Asset backing: Lò SAKALA, a gold-backed unit where 1 Lò = 1 gram of allocated gold through a regulated gold-token platform. 40% of all JV system surplus flows to the trust (see §4 for the 40/40/20 split). On-chain ownership tracking via USDC on Base with 0xSplits smart contracts. 2-of-3 Gnosis Safe multisig (SAKALA International representative + BARSS representative + community representative). MonCash off-ramp for Haitian beneficiary cash-out. Bronze / Silver / Gold / Platinum patronage multipliers (1.0x / 1.5x / 2.0x / 3.0x).

SUB-TRUSTS PER ENDEAVOR

The JV runs multiple endeavors simultaneously (see §3 for the full pillar list). A single commingled trust would destroy per-endeavor accountability: a Pratik trash youth who works 40 hours a week for three years would have no idea whether their effort generated real wealth or whether they are a rounding error in a pooled bucket. A standalone trust per endeavor would destroy margin: N+1 audits, N+1 Delaware agents, N+1 5227 filings.

The fractal structure solves both. One master trust, multiple sub-trusts under common master agreement, shared compliance and custody infrastructure but distinct bylaws, participant rolls, and vesting rules per endeavor. Delaware Trust Code **12 Del. C. § 3801 et seq.** explicitly recognizes series trusts and multi-trust arrangements under a common master (Option C in the full architecture doc). The French fiducie à compartiments and UK protected cell company are international analogs.

Phase 0 sub-trusts (live from Month 1 or standing by for activation):

SUB-TRUST	ENDEAVOR	PHASE 0 PARTICIPANT BASE
Pratik Trash Gold Trust	Waste collection, Cap-Haïtien	40 youth (Year 1), scaling to 500 (Year 3)
Pratik Reforestation Gold Trust	Bamboo coop, hillside restoration	50 farmers Year 1, 200 Year 3
Pratik Charcoal Gold Trust	Biochar / clean-burn charcoal	15 kiln operators Year 1, 80 Year 3
Plakèt Directory Gold Trust	Diaspora verified-business directory	Verified diaspora businesses + first 1K subscribers
Plakèt Payroll Gold Trust	Bulk payroll for Haitian NGOs	500-1,000 workers Y1, 7,500 Y3

All five are dormant-but-filed during Phase 0 minimum-viable activation (Fon Kominote itself plus 2-3 sub-trusts active). The sub-trust template is pre-drafted so that activating a new sub-trust in Phase 1 takes weeks, not quarters.

CROSS-ENDEAVOR PARTICIPANT ACCUMULATION

PARTICIPANT TYPE	LIKELY SUB-TRUST POSITIONS
SAKALA youth doing trash + weekend bamboo	Pratik Trash + Pratik Reforestation
Cap-Haïtien mother subscribing to Harvest Box AND running a verified Plakèt business	Harvest Box + Plakèt Directory
Zanmi Lasante staff nurse paid through Plakèt Payroll	Plakèt Payroll
Diaspora member sponsoring a local Harvest Box subscription	Harvest Box (diaspora-side)

A single participant can accumulate positions across 2-4 sub-trusts. All are visible on the Plakèt dashboard. All generate quarterly distributions. All can serve (with consent) as cross-collateral for payroll-linked loans. The architecture makes multi-endeavor participation natural rather than accidental, which in turn deepens the member-patron relationship against the common extractive drift toward single-SKU vendor relationships.

WHY THIS IS DUAL THETA INVERSION IN PAPERWORK

The dual Theta regime says elites capture 0.85 in direct extraction and 0.45 in crisis extraction. The fractal Konbit architecture inverts both by legally pre-committing 40% of surplus to the participants who generated it, at the endeavor level, before anyone at the JV level can touch it. That 40% is not discretionary. It flows into the sub-trust Safe via 0xSplits and mints Lò SAKALA at quarter-end. The multisig cannot redirect it. The trust agreement is irrevocable. Theta is inverted by contract, not by sentiment. The Resistance Ratchet cannot shift mechanisms out of this, because the legal wrapper defines the mechanism.

2.5 The Firewall Principle

Three entities. Three legally distinct missions. Zero commingling.

ENTITY	LEGAL FORM	MISSION	FUNDERS	PHASE 0 ROLE
SAKALA Community Center	Haitian NGO (23 years operating)	Youth development, community programs, Cité Soleil	Indriy, E Power, Middle Knight, Nancy Young, traditional NGO funders	Partner, not JV member. Purchases services.
Fatraka	Dan's solo waste-commerce vehicle	Trash-to-value commercial operations	Dan's personal equity	Dan's sole-prop vehicle, legally distinct from JV
Impact 480 LLC	Delaware (registering)	JV member, holds Dan's 50% of the JV	Dan personally, via Impact 480	Member of the BARSS × Impact 480 JV

Why no commingling. SAKALA's existing funders funded a 23-year NGO. They did not fund a commercial subscription box, a payroll platform, or a bulk-settlement fintech. Moving SAKALA-restricted capital into any of those would be a donor-intent violation serious enough to jeopardize SAKALA's 501(c)(3) status on the US fiscal sponsor side and its operating permits on the Haiti side. Fatraka is Dan's solo waste-commerce vehicle and his personal balance sheet; it cannot be the JV because the JV requires 50/50 co-ownership with BARSS. Impact 480 is Dan's pre-registered LLC and is the clean vehicle for his 50% JV interest.

The 40/40/20 split applies at every endeavor's operating entity level, not at the JV level.

- **40% Gold Reserve** → to that specific endeavor's sub-trust (Lò SAKALA minting)
- **40% Operational reserves + growth reinvestment** → stays in the operating entity
- **20% Participant patronage distribution** → quarterly cash to participants via MonCash

The 40% Gold slice from Pratik Trash routes to Pratik Trash Gold Trust. The 40% from Plakèt Payroll routes to Plakèt Payroll Gold Trust. Surplus never pools at the JV holding-company level in a way that would obscure which participants generated which share. This is what audit-grade transparency looks like for a multi-endeavor cooperative.

2.6 The BARSS × Impact 480 JV — Core Legal Scaffolding

> *Source:* `11. Strats/Projects/Harvest_Box_JV/01_TERM_SHEET.md` *and the full 21-document legal stack in the Harvest_Box_JV folder.*

THE VEHICLE

- **JV entity:** Delaware LLC, taxed as partnership (default)
- **Members:** BARSS LLC (50%) + Impact 480 LLC (50%)
- **State of formation:** Delaware [LOCK]
- **Term:** Perpetual. JV runs the rest of Wesley's and Dan's natural lives. No termination date. Dissolution only via unanimous written consent of both members plus both founders personally, bankruptcy, or judicial order. **No member may unilaterally withdraw, force dissolution, or force buyout of the other member.** This is the covenantal architecture from the April 15 memory entry: partnership is perpetual.

MANAGEMENT

Co-Manager structure. Wesley (IP, finance, external relationships, legal) and Dan (ground operations, Haiti relationships, franchise rollout). Signing authority thresholds calibrated for 2-person execution:

THRESHOLD	AUTHORITY
Under $5,000	Either Co-Manager signs solo
$5,000 – $25,000	Signing Co-Manager gives 72hr notice, either may veto
Over $25,000	Both signatures required
Over $100,000 or any IP transfer	Member vote required, unanimous

RECIPROCAL LIFETIME STIPEND AND CROSS-GUARANTY

Dan receives a **monthly lifetime stipend** (floor $4,000/mo, CPI-or-3% adjustment, K-1 guaranteed payment not W-2 wages) from the JV. **BARSS LLC guarantees the shortfall** if the JV cannot cover in any given month, capped at BARSS LLC entity assets to protect Wesley's heirs from indefinite personal liability. Survivor benefit: 50% to Dan's designated beneficiary upon his death.

The agreement is **reciprocal**: Impact 480 LLC commits to cross-guarantee any similar lifetime support obligations Wesley may formalize on his side. Covenantal mutuality made legally visible. This is why the JV term is perpetual… the economic terms only make sense if the commitment is lifetime.

REVENUE DISTRIBUTION WATERFALL

Top-of-waterfall operating mechanics (run at the JV level before anything reaches the endeavor 40/40/20 split):

1. **Operating expenses** — payroll, tech infra, counsel retainer, accounting, insurance
2. **Tax reserve** — mandatory tax distribution per §5 of term sheet, no later than March 15 following each tax year
3. **Critical debt service** — any JV-level loans or bridge-capital repayment
4. **Dan's Lifetime Stipend** — paid before any discretionary distributions
5. **Pre-profit services fees** — BARSS LLC → JV services retainer + Impact 480 → JV services retainer (flow to each member's solo LLC, independent of 50/50)

6. **Discretionary distributions** — remaining cash split 50/50 subject to reserve requirements

Then, at each operating endeavor (Pratik Trash operating entity, Plakèt Payroll operating entity, etc.), the 40/40/20 split runs on that endeavor's operational surplus (§2.5).

THE 21-DOCUMENT LEGAL STACK

The JV is not a handshake. The full paperwork is drafted and sitting in `11. Strats/Projects/Harvest_Box_JV/`, ready for counsel review:

01 Term Sheet · 02 Document Checklist · 04 Name Options · 05 State Comparison · 06 Operating Agreement Skeleton · 07 IP License Skeleton · 08 Lifetime Stipend Agreement · 09 Services Agreements · 10 Haiti Ops Layer · 11 Attorney Brief · 12 Certificate of Formation · 13 Member Subscriptions · 14 Organizational Resolutions · 15 Reciprocal Lifetime Support · 16 Bank Resolution · 17 EIN Application Prep · 18 Trademark ITU Prep · 19 Name Clearance Results · 20 Counsel Candidates · 21 Grant Cover Letter Reference · 23 BARSS LLC Formation Ready.

Counsel engagement budget: $2-5K for shared Delaware transactional attorney. Candidates identified in doc 20.

2.7 Phase 0 — What This Architecture Executes in Month 1

This is the connection-back to the load-bearing framing rule. Everything above exists for the following reason.

Phase 0 is 2 people, 36 months, $50-75K bridge capital, 4 pillars ignited simultaneously even if barely. The architecture is the scaffolding that lets 2 founders execute across 4 endeavors without losing legal integrity, member-patron accountability, or optionality on Phase 1 capital.

MONTH 1 EXECUTION, ANCHORED TO THE ARCHITECTURE

ARCHITECTURAL ELEMENT	MONTH 1 EXECUTION
Delaware JV formation	File Certificate of Formation (doc 12), BARSS LLC (doc 23) + Impact 480 LLC ready. Operating Agreement (doc 06) + Lifetime Stipend (doc 08) + Reciprocal Support (doc 15) executed.
Fon Kominote SAKALA master trust	Already filed. No new action needed. Lives.
Sub-trust activation (2-3 of 5)	Activate Pratik Trash Sub-Trust + Plakèt Payroll Sub-Trust + Pratik Reforestation Sub-Trust using pre-drafted template. The other two remain filed-but-dormant until Phase 1.
Firewall	SAKALA / Fatraka / Impact 480 operate distinct books from day one. Shared Haiti-side bookkeeper with clear allocation tables.
Patronage dividend mechanism	40/40/20 split runs manually in QuickBooks for first 6 months while Plakèt dashboard reaches MVP. Subchapter T compliance verified at Q3 annual review.
Worker ownership	First 40 Pratik youth onboarded to Pratik Trash Sub-Trust with Bronze/Silver tier assignments based on Year 1 hours. Lò positions begin accruing at Q1 end.
Closed-loop waste-to-value	Trash route → biochar kiln → compost → bamboo nursery → construction supply. All loop nodes run by Impact 480 operating entity with cross-endeavor accounting.
Surin co-publication	Joint policy brief with Réginald Surin using BARSS methodology + Sogebank public-data persistence coefficients. Academic legitimacy for Phase 1 fundraise.
Reciprocal lifetime stipend	First $4,000 monthly K-1 guaranteed payment issues to Dan in Month 1 from $50-75K bridge cap. Cross-guaranty documented.

WHY THE ARCHITECTURE SURVIVES 2-PERSON BOOTSTRAPPING

- **No complex upstream capital stack.** The JV does not need LPs in Phase 0. $50-75K from BARSS LLC founder contribution plus a Fon Kominote-side grant or individual mission-capital check is enough.

- **Sub-trust template is reusable.** Activating new sub-trusts in Phase 1 is template-population, not new architecture.
- **40/40/20 runs manually until Plakèt MVP.** Automation can come in Month 9-12 when ARR supports it.
- **Cross-guaranty means neither founder can walk.** That means Phase 1 investors looking at this in Month 18 see a 2-year execution track from founders who provably cannot exit.

WHY THE ARCHITECTURE SCALES INTO PHASE 1 WITHOUT RESTRUCTURING

- **Delaware LLC + sub-trust structure handles any participant count.** Same legal wrappers whether we are at 100 members or 10,000.
- **IP license is non-exclusive and revocable.** BARSS can license the EEDTM methodology to additional JVs (Liberia, Ghana, Jamaica) without restructuring this JV.
- **Reciprocal cross-guaranty is already in place.** Phase 1 does not require re-negotiating the core covenant.
- **Sub-trust amendment thresholds are already set.** Scaling a sub-trust from 40 participants to 400 requires a Participant Council majority vote, not a master-trust amendment.

The architecture earns the right to Phase 1 capital by proving out the 4 pillars at small scale across 36 months. By end of Phase 0, the portfolio should show: ~500-1,000 workers accruing Lò positions, ~$30-60K ARR on Plakèt Payroll, ~5,000 tons of waste diverted through Pratik Trash, ~20 hectares bamboo-planted through Pratik Reforestation, ~1,000 verified listings through Plakèt Directory, and a joint academic brief with Surin published in a Caribbean policy journal. That record is what Phase 1 LPs (family offices, reparations capital, CNHRR receiving-vehicle review) will be evaluating.

The architecture is the scaffolding. Phase 0 is the proof. Phase 1 is the scale. Everything in this portfolio is sized accordingly.

Section 2 of Pratik × BARSS Ops Launch Brattle Portfolio. Draft v1, 2026-04-15.

The Four Plays

Section 3 — The Four Plays

> *[!abstract] Section claim Four plays ignite in Phase 0. All four. Day 1. Executed by Dan and Wesley personally, even if barely, for 36 months. No play waits for Phase 1 capital. No play is a "future optionality." The minimum viable version of each pillar runs from Month 1, and the tiny version is what earns the right to the Phase 1 scale… $10-15M infrastructure capital deployed against a system that has already survived three years of the worst operating environment in the Western Hemisphere.*

This section walks each of the four plays in identical shape… the one-sentence pitch, the Phase 0 "even if barely" starter, the mechanics, the sub-trust, the Phase 1+ scale trajectory, and the structural claim about what Haiti problem this play uniquely addresses. Cross-reference §2 for the architecture the plays plug into, §4 for the financials each play generates, and §5 for the 20-year trajectory that the four plays collectively produce.

The format is identical on purpose. Every pillar is a first-class citizen. None is subordinate to the others. Trash, bamboo, biochar, and Plakèt are the four legs of the same stool, and the stool falls if any one of them is deferred to "later."

3.1 Play 1 — Trash Collection (Haiti ground, Dan-led)

THE ONE-SENTENCE PITCH

A cooperative waste-collection enterprise at Limonade, staffed by SAKALA youth who build their own rickshaws, enroll their own neighbors on a tiered subscription, and convert the waste they collect into feedstock for reforestation compost and biochar kilns… flood-mitigation infrastructure paid for by the value stream the waste already contains.

PHASE 0 IGNITION (MONTH 1-36, "EVEN IF BARELY" STARTER)

40 SAKALA youth at 2 Limonade sites. 30 youth from the SONJE AYITI cohort plus 10 from Bois de Lance. **4-6 cargo rickshaws, welded by the youth themselves** during a 12-week AWS D1.1-equivalent welding cohort running Month 1-4. This is the marquee Phase 0 mechanic… the first 10-15 youth build the rickshaws they then ride. Rickshaw BOM is fabricable at ~$300-600/unit locally. No imports, no shipping container, no six-month procurement cycle. Steel + weld + wheels + seat.

500-1,000 households enrolled across 3 zones (Limonade town / Bois de Lance / Roucou rural), each receiving a free 3-bin kit (organic / recyclable / landfill). The 3-bin kit is the physical interface that makes the whole stack work… if the bins fail in the field, the tier ladder collapses, the feedstock stream collapses, and Plays 2 and 3 lose their upstream.

13 of 30 ultimate transfer points mapped by the Cert Track #8 Mapping cohort using KoboToolbox field forms and OpenStreetMap baseline. This is also street-level GIS work that no municipal authority has produced for Limonade in the past decade.

SOIL backyard as hub. MOU signed Month 0. Transfer-point tonnage flows to SOIL for processing, wastewater-composting co-location, and tipping-fee revenue capture.

Wage structure: $150-250/mo training wage during Weeks 1-12, escalating to $10/day operational wage on rickshaw commissioning. Training wage is the floor, not the ceiling.

PHASE 0 STARTER PARAMETER	MONTH 1-36 VALUE
Youth cohort	40 (30 SONJE AYITI + 10 Bois de Lance)
Zones	3 (Limonade town, Bois de Lance, Roucou rural)
Rickshaws	4-6 (self-fabricated)
Households enrolled	500-1,000
Transfer points mapped	13 of ultimate 30
Hub	SOIL Limonade backyard (MOU active)
Y1 revenue target	~$62K / break-even ~$48K

THE MECHANICS

Three independent revenue streams stack so a shortfall in any one does not collapse operations.

- **Stream A: Tipping fees.** SOIL + municipality pay per ton processed at hub. Y1 target ~$2,400/mo.
- **Stream B: Household collection fees.** Tiered subscription, Bronze/Silver/Gold/Platinum ladder on the household side, priced to keep the lowest tier accessible to any enrolled neighbor. Y1 target ~$1,800/mo.
- **Stream C: Biochar upstream feedstock.** Woody fraction sold into Play 3 kilns at internal transfer price. Y1 target ~$900/mo. This stream activates Month 7-9 once Play 3 kilns commission.

Certification tracks ignited by this play:

TRACK #	NAME	IGNITION POINT	LEAD CERT
3	Welding	Rickshaw fabrication Weeks 1-12	AWS D1.1-equivalent
8	Mapping / GIS	Zone mapping, route logging, transfer point census	OpenStreetMap mapper
9	Waste Management	Sorting audit, tier scoring	Haiti MENV waste handler
11	Fleet Maintenance	Rickshaw upkeep, eventual battery conversion	ASE-equivalent

Welding cohort is the marquee training event of the entire Phase 0 launch. The first 10-15 youth come out the other end with a portable AWS D1.1-equivalent credential and a fleet of six rickshaws they personally fabricated. That certification moves with them for life. The rickshaws move the waste.

Integration with other plays… organic fraction flows to Play 2 nursery beds as compost feedstock. Woody / paper fraction flows to Play 3 kilns as biochar input. Nursery trainee overflow rotates into collection crew. Biochar dust returns from Play 3 as household odor control inside the 3-bin units, which is the single highest-leverage retention mechanism in the pilot (households that stay compliant on sort past Month 6 almost always stay permanently).

THE SUB-TRUST

Pratik Trash Gold Trust. Named sub-trust under the master Fon Kominote SAKALA (Delaware irrevocable charitable trust, 12 Del. C. § 3801 series-trust architecture). Not commingled with the Pratik Reforestation Gold Trust, the Pratik Charcoal Gold Trust, the Plakèt Directory Gold Trust, or the Plakèt Payroll Gold Trust.

Beneficiaries: 40 youth cooperative members + enrolled households at the two Limonade sites + certification trainees on Tracks 3/8/9/11.

Lò accumulation: 40% of Play 1 surplus routes into this sub-trust specifically, converted to Lò SAKALA at quarter-end (1 Lò = 1g allocated gold). 40% reinvested in the Impact 480 operating entity. 20% distributed to participants as quarterly cash via 0xSplits, off-ramped to MonCash within 7 days. Tier-weighted Lò allocation on Bronze 1.0x / Silver 1.5x / Gold 2.0x / Platinum 3.0x multipliers, with contribution units = hours worked (youth) and tons sorted-and-delivered (households).

When Plakèt Payroll goes live Month 3, the 40 youth also receive payroll-side Lò via the default 60/25/15 split, with the 15% Lò slice routed directly into this same Pratik Trash Gold Trust. Payroll-side wealth accrual + surplus-side wealth accrual compound on the same per-participant ledger.

PHASE 1+ SCALE

YEAR	YOUTH	BUCKETS SERVED	TRANSFER POINTS	CAPEX SIGNAL
Y1	40	500-1,000	13	Welding cohort self-funds
Y3	120-150	8,000-12,000	20	First IFC/IDB waste enterprise tranche
Y5	300	40,000	28	Mid-scale fleet electrification
Y10	500	80,000	30	$8-15M waste enterprise capex absorbed

The trajectory from 500 households in Year 1 to 80,000 buckets in Year 10 is an 80-160x scale. The $8-15M capex at Year 10 is the infrastructure cost to hit that scale, but it does not hit the P&L in Phase 0. Phase 0 is self-funded by three stacked revenue streams clearing a ~$48K break-even against ~$62K top line.

WHY THIS PLAY MATTERS

This is flood-mitigation infrastructure AND certification training AND city-scale street mapping AND Play 2/Play 3 feedstock all at once, in a single operational footprint, in a metro that currently has none of those systems and loses lives every hurricane season to clogged drainage. The structural claim is that Haiti does not have a waste problem… it has a waste-value-capture problem. The waste already has value embedded in it. The question is who captures the value and whether the capture mechanism is cooperative or extractive. Play 1 answers “cooperative, named sub-trust, tiered participation” and demonstrates that the economics work at the 40-youth / 500-household scale before any external capital arrives.

3.2 Play 2 — Reforestation / Bamboo (Haiti ground, Dan-led)

THE ONE-SENTENCE PITCH

A cooperative bamboo nursery and plantation at SOIL Limonade backyard, seeded from the existing SAKALA × Jupille × BambouFacile partnership, producing six parallel revenue streams from a single hectare before the commodity extraction trap closes on any one of them.

PHASE 0 IGNITION (MONTH 1-36, “EVEN IF BARELY” STARTER)

0.5 ha starter plot at SOIL backyard, Limonade. Site confirmed via Maya / SOIL partnership March 25, 2026. Wastewater-composting access, existing SOIL legal umbrella, already under Dan’s board-co-chair purview. No new land acquisition required.

Cuttings sourced via existing SAKALA × Jupille × BambouFacile partnership LOI. Jupille Facile provides first *Guadua angustifolia* cuttings from PREBHA nursery stock. Wild *Bambusa vulgaris* cuttings sourced within 5-10 km of Limonade per the census work in `8. Research Reports/Haiti/Haiti_Bamboo_Biomass_Census_Feasibility.md`.

Initial plantings are Bambusa vulgaris… the species that has been naturalizing in Haiti since 1760, regenerates in 2-4 weeks after harvest, and carries the 2-4 year first-revenue window (charcoal and biochar feedstock at Y2-3). Guadua goes in alongside, slower maturity (Y3-5 for construction poles), but the two species planted together produce staggered revenue across the 36-month Phase 0 window.

2-3 youth rotating through Cert Track #10 Composting + Cert Track #8 Mapping for biomass census work. Compost trainees prepare nursery beds from Play 1 organic fraction. Mapping trainees run KoboToolbox MRV forms and photo-documented GPS tags that feed Verra standing-grove PDD in Year 2.

Bamboo residuals feed Play 3 biochar kilns from Month 9 onward as proof-of-loop. Off-grade culms, tops, branches, and post-curing trimmings never leave the site as waste. The same hectare generates Verra standing-grove carbon credit AND Puro biochar credit without double-counting.

PHASE 0 STARTER PARAMETER	MONTH 1-36 VALUE
Plot size Y1	0.5 ha (SOIL backyard)
Species	Bambusa vulgaris primary, Guadua angustifolia secondary
Youth rotating through	2-3 (scaling to 15 by end Y1)
Cuttings source	Jupille Facile PREBHA + wild-stand within 5-10 km
Y1 operating cost target	Sub-$5,000
Y1 revenue source	Wild-harvest charcoal (2-4 week flow)

THE MECHANICS

Six revenue streams from one hectare:

1. Construction poles (*Guadua*, Y3-5, $8-80/pole, replaces imported lumber)
2. Furniture / artisan stock (*Guadua* + *B. vulgaris*, Y3-4, Harvest Box upsell channel)
3. Textile fiber (*B. vulgaris*, Y3+, requires Phase 4 processing capex)
4. Carbon sink credits (both species, Y2 baseline / Y3 issuance, Verra standing-grove + Puro biochar)
5. Biochar feedstock (off-grade material, Y2-3, internal transfer to Play 3)
6. Household cooking charcoal (*B. vulgaris*, Y1 wild-harvest → Y2 cultivated, $0.75-1.00/kg into the $392M Haitian cooking-fuel market)

No monocrop commodity play has this profile. Any single-stream operator (charcoal-only, poles-only, credits-only) gets price-disciplined by the buyer. A six-stream cooperative is substitutable across channels, which is the structural argument against the extraction trap.

Certification tracks ignited: #10 Composting, #8 Mapping/GIS, #4 Plumbing (drip irrigation on Y1 transplants where rain-fed thresholds fail).

Integration with other plays... Play 1 organic fraction becomes nursery bed preparation and field-transplant mulch. Play 3 biochar returns as soil amendment and carbon-locked root-zone additive. The nursery trainee overflow rotates into Play 1 collection crew. The bamboo-to-biochar residual pipeline is the closed loop that makes both the carbon math and the soil remediation claim defensible on audit.

THE SUB-TRUST

Pratik Reforestation Gold Trust. Named sub-trust under master Fon Kominote SAKALA, sibling to the Pratik Trash Gold Trust but ledgered separately. Not commingled.

Beneficiaries: bamboo cooperative farmers + certification trainees on Tracks #10 / #8 / #4.

Lò accumulation: 40% non-dilutable slice on all six revenue streams after direct opex (construction poles, furniture, textile, Verra credits, Puro credits, wild-harvest charcoal) flows into the sub-trust. The carbon credit proponent of record is the cooperative, not BARSS, not Impact 480, not the third-party verifier. All carbon credit issuance proceeds route directly into the sub-trust Safe on Base for quarterly Lò SAKALA minting. Tier-weighted allocation (Bronze 1.0x / Silver 1.5x / Gold 2.0x / Platinum 3.0x) with contribution units = kg harvested + nursery propagation-hours + MRV-data-packets filed.

Plakèt Payroll 15% Lò slice routes into this sub-trust for participants working the bamboo cooperative, same fractal mechanic as Play 1.

Non-negotiable anti-extraction clauses baked into the sub-trust governance: no external buyer can purchase >10% of annual output without cooperative board supermajority. No individual equity in the grove... members hold patronage rights (Subchapter T model, REI template) against harvest revenue. Land and plantings remain cooperative property. This is what prevents a Cargill-style off-take from hollowing the cooperative into a de facto plantation.

PHASE 1+ SCALE

PHASE	YEAR	HECTARES	REVENUE MIX	GATE
Starter	1	0.5	90% wild-harvest charcoal	Nursery propagation >15x. Retention >80%.
Pilot	2	10	70% charcoal + 30% biochar feedstock	First Verra PDD drafted. First Puro batches.
Regional	3	100	Charcoal + biochar + first Guadua poles	First carbon credit issuance.
National pilot	5	500	6-stream active	Sub-trust 40% allocation enforced.
Scaleout	7	5,000	6-stream at coop scale	INBAR membership secured.
Saturation	10	25,000	Full 6-stream cooperative	Departmental-scale reforestation.

25,000 ha at Year 10 is the Limonade-centered trajectory. Nationwide across 344 SAKALA franchise nodes plus Impact 480 direct-service sites the addressable surface is 50,000-100,000 ha.

WHY THIS PLAY MATTERS

Bamboo is the only reforestation species class that pays smallholders inside a 3-year window, stays cooperative because processing happens in-country, sequesters 12-70 tCO_2/ha/year (versus 6.4 for mature tropical forest), regenerates without replanting, and remediates lead/cadmium/arsenic/chromium in Haitian soils as a co-product of plantation rather than an additional cost. Mango, coffee, cacao, and citrus all require 5-10 years to pay. Pine and hardwood are 15-30. Every other species class kills cooperative economics because smallholders cannot wait a decade for first revenue. Bamboo is the structural answer to “reforestation that pays the reforester before the donor grant runs out.”

3.3 Play 3 — Charcoal Alternatives / Biochar (Haiti ground, Dan-led)

THE ONE-SENTENCE PITCH

A biochar briquette enterprise at SOIL Limonade backyard, two to three drum retort kilns built by the same welding cohort that built the rickshaws, producing a cooking fuel that replaces wood charcoal at price parity at the market stall and sequesters carbon on the Puro.earth registry in the same physical kilogram.

PHASE 0 IGNITION (MONTH 1-36, “EVEN IF BARELY” STARTER)

2-3 drum retort kilns at SOIL Limonade backyard. 55-gallon batch retort format, fabricated locally at ~$300-600/unit by the Play 1 welding cohort in Weeks 8-14 of the combined Track #3 curriculum (they built the rickshaws in Weeks 1-12, the kilns come next). No imported continuous pyrolyzer, no six-month shipping container. Welded in Limonade, commissioned on a concrete pad at SOIL, operational by Month 3-4.

Siting: open-air shade structure on a 6m x 8m concrete pad, graveled drainage, prevailing-wind-aware layout so smoke drifts away from SOIL composting beds. 3m fire-break perimeter. Water barrel + sand bucket at each station.

6 youth as kiln operators out of the 40-youth Limonade cohort. Two operators per kiln on rotating shifts plus one QC/packaging lead plus one briquette press operator. Cert Track #1 UHPC ignites during kiln pad and chimney construction (concrete finisher Level 1). Cert Track #10 Composting/Soil Science handles biochar characterization, QC moisture/ash testing. Cert Track #11 Fleet Maintenance handles kiln body upkeep and seal replacement, shared curriculum with Play 1 rickshaw maintenance.

Hand-lever briquette press with cassava starch binder, 80/15/5 mix (char / starch / water). Retail at Limonade market as wood-charcoal replacement at price parity ($0.80-1.20/kg target, versus incumbent wood charcoal at $1.00-1.50/kg). Batch-numbered QR codes on every package for Puro.earth verification and tier credit attribution.

Y1 output target: 15-25 tons biochar. Conservative math runs 2 kilns × 60 kg/batch × 1 batch/day × 250 operating days = 30 tons gross, derated ~40% for weather, training, quench delays, and feedstock moisture issues = ~18 tons realistic.

PHASE 0 STARTER PARAMETER	MONTH 1-36 VALUE
Kiln count Y1	2-3 drum retorts
Kiln fabrication	Self, via Track #3 welding cohort
Youth operators	6
Y1 biochar target	15-25 tons
Briquette binder	Cassava starch 80/15/5 mix
Retail channel	Limonade market stall at price parity
Carbon revenue Y1	~$5-9K (Puro.earth, 50 tCO2e × $100-180)

THE MECHANICS

Biochar built from waste-stream feedstock (organic woody fraction from Play 1, bamboo residuals from Play 2, paper, cardboard, bone, shell) replaces wood charcoal one-for-one at the cooking fire AND sequesters carbon in the briquette. Every kilogram of biochar burned for cooking is a kilogram of tree not felled plus a fraction of a tonne of CO_2 kept out of atmosphere.

The pitch at the market stall is not "save the forest." It is "burns longer, smokes less, same price." Environmental math is the backend. Cooking economics is the front-end sale.

Feedstock integration:

SOURCE	MATERIAL	FLOW Y1 TONNAGE
Play 1 (trash)	Organic woody fraction from 3-bin sort	30-45 green / 20-30 dry
Play 1 (trash)	Paper, cardboard, non-recyclable fiber	8-12 tons
Play 1 (trash)	Bone, shell, ag residue	2-4 tons (premium mineral char SKU)
Play 2 (bamboo)	Bamboo residuals (culm butts, thinnings)	5-8 tons (premium, high fixed carbon)

Zero virgin wood input. Zero felled trees. That is the non-negotiable... we replace the incumbent, we do not recreate it.

Carbon pathway: Puro.earth simplified biochar methodology is the single voluntary carbon market instrument where a Y1 operation of our scale can credibly register. 3-month registration window. Ex-ante issuance on the carbon physically locked in the char at production. Verra VM0044 and Gold Standard biochar are Year 2 targets.

THE SUB-TRUST

Pratik Charcoal Gold Trust. Named sub-trust under master Fon Kominote SAKALA. Not commingled with Plays 1, 2, or Plakèt sub-trusts.

Beneficiaries: 6 kiln operators Y1 (scaling to ~60 by Y5) + biochar cooperative member-owners (Konbit model, not hourly laborers) + certification trainees on Tracks #10 / #1 / #11.

Lò accumulation: 40% Gold Reserve slice on Play 3 surplus (briquette retail + bulk biochar sales + internal feedstock transfer receipts) routes into the sub-trust. **Full biochar carbon credit revenue also routes into the sub-trust** (not the operating entity), since the credits are the sequestration side of the same ton of char the participants produced. Contribution metric = kg of biochar QC-passed attributable to each operator, quarterly recalculated. Tier-weighted allocation on Bronze 1.0x / Silver 1.5x / Gold 2.0x / Platinum 3.0x.

Plakèt Payroll 15% Lò slice routes into this sub-trust for kiln operators, briquette pressers, QC leads, packaging staff. Cross-endeavor participants (a youth working Play 1 weekdays + Play 3 weekends) accrue separate Lò positions in both sub-trusts, cross-collateralizable for payroll-linked loans.

PHASE 1+ SCALE

YEAR	KILNS	YOUTH	BIOCHAR (TONS)	NOTES
Y1	2-3 drum retorts	6	15-25	Puro.earth registration filed
Y2	5-6 drum retorts	12	45-70	First credit issuance
Y3	2 retorts + 1 continuous pyrolyzer	20	120-180	Commercial-grade facility
Y4	Continuous + 6 satellite retorts	35	300-400	FL diaspora export pilot
Y5	2 continuous + 10 satellite	60	600-800	Full Nord corridor coverage

WHY THIS PLAY MATTERS

Biochar is the single intervention that replaces wood charcoal at price parity AND sequesters carbon AND reverses Haiti's deforestation loop... no other product does all three. Haiti has <2% primary forest remaining, 94-95% of households cook with wood charcoal, 946,500 metric tons produced annually, 53,000 hectares of trees felled per year versus 2,000 hectares replanted (net loss 51,000 ha/yr), and the charcoal trade is a $200-400M/yr domestic market... the second-largest agricultural value chain in the country, roughly 5% of GDP. The demand is permanent. The supply is destroying the country. Biochar closes the gap.

3.4 Play 4 — Plakèt (US + Haiti, Wesley-led)

THE ONE-SENTENCE PITCH

A bundled verification + fintech + directory + payroll platform that becomes the monetary fabric for Haitians paying Haitians in value that does not evaporate to depreciation, does not bleed to cash-handling friction, and does not expose workers or employers to payday-predictable violence... all five sub-modules live on Day 1 at token scale.

PHASE 0 IGNITION (MONTH 1-36, "EVEN IF BARELY" STARTER)

All five sub-modules ignite in Year 1 even if token-scale. No "phase 2 optionality," no "we will add payroll later." All five live Month 1-12.

Plakèt Verified (KYC flow): built on Persona, first 50-100 diaspora businesses verified. L1 liveness check, L2 ID + address, L3 business entity (EIN + officer ID + UBO). Token-scale universe, but the rails are live and the first audit trail exists.

Plakèt Library: initial templates + grant broker + cultural archive, 20-50 library members. This is the LMS/grants layer, Supabase-backed, Kreyòl/French/English at launch. Library is what gives Verified members a reason to stay subscribed between verification renewal cycles.

Plakèt Pay (Haiti domestic vendor rails): Limonade pilot with 100 vendors. Low-cost Android devices + NFC/QR acceptance. USDC on Base as the settlement rail. MonCash as the off-ramp for gourde spend. Mannitaks as the regulatory back-end for cross-border flows. **Zero Plakèt transactions route through Sogebank** (BAM BAM / Sogener-Vorbe exposure flag, Surin intel). Mannitaks + Unibank + MonCash + direct Base chain.

Plakèt Directory: first 75-150 tier-certified businesses listed. Bronze/Silver/Gold/Platinum ladder published publicly. This is the diaspora-facing face of the platform and the upstream funnel that feeds Haiti-side vendor acquisition.

Plakèt Payroll (captive customer launch): this is the Phase 0 mechanic that eliminates cold outreach entirely.

CAPTIVE DAY-1 CUSTOMER	Y1 WORKFORCE	LEAD OWNER	STATUS
SAKALA Community Center	~40	Dan	Confirmed (Dan is ED)
SOIL Haiti	~200	Dan + Wesley	Confirmed March 25 partnership
HELP Haiti	~20-30	Wesley	Warm (Conor Bohan intro April 15)
Pratik internal (Impact 480)	~40 youth	Dan + Wesley	Own venture
Konbit Lapen (bamboo coop, Play 2)	~50-100	Dan	Own coop in buildout
Day-1 payroll customer total	**~300-400**	—	**No cold outreach required**

300-400 Day-1 payroll workers before a single external sales call. Default 60/25/15 pay-split (gourde MonCash / USDC savings on Base / Lò SAKALA gold allocation). Worker rebalance allowed quarterly within 40% gourde minimum and 30% Lò maximum. Payroll-linked loans at 6-10% APR collateralized against vested Lò position > $100 equivalent (versus Haitian informal lending at 20-50% APR).

THE MECHANICS

Plakèt runs five sub-modules on a shared Next.js + Supabase + Base stack. All five sub-modules share auth, data, and billing tenancy. Tier score is the one scalar that touches every module.

Revenue engines:

- **Subscription bundle** (Verified + Library + Directory access). Individual $50/yr, Silver Business $400/yr, Gold $1,200/yr, Platinum $5,000/yr. Y1 ~377 paying members scaling to Y5 ~2,840.
- **KYC verification fees** (basic $50, business $200, annual renewals at half-price). Y1 ~480 units, Y5 ~5,000+ units.
- **Plakèt Pay take-rate** on vendor transactions. 0.5-1.0% blended, offset by MonCash + Mannitaks cost. Haiti domestic is the primary TAM ($8-14B/yr cash-settled fabric, 4,200-6,400 unserved Cap-Haïtien merchants at Phase 1).
- **Remittance rail fees** at below-market corridor (Mannitaks-backed, 1-2% versus incumbent 4-6%).
- **Plakèt Payroll subscription + per-worker fee** on the employer side. 300-400 Day-1 workers at captive coalition scaling to 2,000-10,000 by Y5 as diaspora NGO outreach turns on (Partners in Health, Fonkoze, Zanmi Lasante are Tier 2 targets Year 2+).

Certification tracks touched: Plakèt is the connective tissue that binds certification attribution across all 12 tracks on the BARSS side. Every youth certified through any track gets a Plakèt profile. Every tier promotion flows through the Plakèt ledger. Every Lò SAKALA position is visible on the Plakèt dashboard.

THE SUB-TRUSTS

Two sub-trusts from Play 4, both named under master Fon Kominote SAKALA.

Plakèt Directory Gold Trust. Beneficiaries: tier-certified diaspora businesses + directory-side Platinum subscribers + KYC verification users with vested tier position. 40% of Plakèt subscription + KYC surplus routes here.

Plakèt Payroll Gold Trust. Beneficiaries: Day-1 captive coalition workers (SAKALA + SOIL + HELP + Pratik + Konbit Lapen staff) + diaspora NGO payroll users as they onboard + employer-side Platinum subscribers. 40% of Plakèt Payroll surplus routes here. The 15% Lò slice from every worker's pay-split also accumulates in their specific endeavor sub-trust (Pratik Trash, Reforestation, Charcoal, or Payroll) per fractal architecture §6-7.

PHASE 1+ SCALE

YEAR	DIASPORA PAYING MEMBERS	HAITI VENDORS	PAYROLL WORKERS	BLENDED REVENUE
Y1	377	100	300-400	~$0.3-0.5M
Y2	966	500	1,000	~$1.8M
Y3	1,839	1,500	3,500	~$4.2M
Y5	2,840	3,500	20,000	**$8.58M**

EBITDA-positive Month 9-12 (expanded base case per doc 03 amendment). $50-75K bridge capital required (down from $150K) given captive customer economics eliminate paid-marketing requirement.

WHY THIS PLAY MATTERS

Plakèt is the monetary fabric for Haitians paying Haitians in value that doesn't evaporate... violence-avoidance (no payday cash pickup theater, no ATM-targeting schedule), depreciation-resistance (USDC + Lò SAKALA accumulate; gourde portion sized for daily spend only), bank-friction collapse (no Sogebank, no 3-7 day SWIFT wires, no 4-6% WU/MoneyGram haircut), tax compliance on both Haitian (Code Fiscal art. 72 DGI withholding) and US (1099-NEC / 1096 aggregate) sides, donor-ready audit bundles. The Day-1 captive coalition of ~300-400 workers eliminates the cold-outreach requirement that kills most fintech launches. SAKALA + SOIL + HELP + Pratik + Konbit Lapen are the first five customers, signed in Month 1-3, no sales call required.

3.5 The Captive Customer Launch Coalition

The single biggest structural advantage of the Plakèt Payroll launch is that the first five customers are already in the room.

CUSTOMER	WESLEY OR DAN RELATIONSHIP	DAY-1 COMMITMENT
SAKALA Community Center	Dan is Executive Director	~40 workers
SOIL Haiti	Dan is Board Co-Chair	~200 workers
HELP Haiti	Conor Bohan intro April 15, warm	~20-30 workers
Pratik (Impact 480)	Dan + Wesley own the vehicle	~40 youth
Konbit Lapen (bamboo coop)	Dan + Wesley own the coop	~50-100 workers
Coalition total	—	**~300-400 workers**

No cold calls. No paid advertising. No "fintech customer acquisition cost" line in the pro forma. The first five customers are people who already trust Dan and Wesley personally, who already have the pain Plakèt solves, who already need the audit trail and the violence-avoidance and the depreciation-resistant savings rail.

The captive coalition is the reason Plakèt Payroll lands 300-400 Day-1 users before the first external sales call. It is the reason the bridge capital requirement is $50-75K instead of $150K+. It is the reason EBITDA turns positive at Month 9-12 instead of Month 19. It is the Phase 0 proof that the product works in the field with real Haitian workers and real Haitian employers, not a Miami demo at a fintech conference.

Scale-out from the captive coalition in Year 2+... Partners in Health / Zanmi Lasante (~6,500 Haiti-side staff), Fonkoze (~800 staff), and the broader diaspora NGO universe are Tier 2 outreach with warm introductions available through SAKALA, SOIL, and HELP cross-references. The captive coalition does the proof. The Tier 2 universe does the scale. No cold corridor.

3.6 The Cross-Play Integration Matrix

The four plays are not four parallel projects. They are four legs of a single operational stack. Waste flows into bamboo compost and biochar feedstock. Bamboo residuals flow into biochar. Biochar flows back into bamboo soil amendment. Plakèt Pay settles transactions for the three Haiti-ground plays. Plakèt Payroll pays workers across all three Haiti-ground plays.

FROM	TO	MATERIAL OR SERVICE FLOW	VALUE CAPTURE
Play 1 (Trash)	Play 2 (Bamboo)	Organic fraction → nursery compost + transplant mulch	Compost offsets Play 2 input cost to zero
Play 1 (Trash)	Play 3 (Biochar)	Woody + paper + cardboard + bone/shell fraction → kilns	Revenue Stream C (~$900/mo Y1)
Play 2 (Bamboo)	Play 3 (Biochar)	Bamboo residuals (culm butts, thinnings, tops, trimmings)	Premium high-fixed-carbon feedstock
Play 3 (Biochar)	Play 2 (Bamboo)	Biochar as soil amendment in nursery beds and field transplants	Carbon-locked root-zone additive, soil remediation
Play 3 (Biochar)	Play 1 (Trash)	Biochar dust as household odor control in 3-bin units	Retention mechanism (>Month 6 compliance)
Play 2 (Bamboo)	Play 1 (Trash)	Nursery trainee overflow → collection crew	Labor pipeline
Play 4 (Plakèt Pay)	Plays 1-3	Settlement rail for all vendor transactions (tipping fees, subscriptions, charcoal retail, carbon credit receipts)	Transaction data, tier attribution, ledger integrity
Play 4 (Plakèt Payroll)	Plays 1-3	Worker pay-split across gourde / USDC / Lò for every cooperative member	15% Lò routes to endeavor-specific sub-trust
Plays 1-3	Play 4 (Plakèt Directory)	Tier-certified Haiti-side cooperatives listed in diaspora directory	Directory content depth, diaspora-to-Haiti flywheel

No play operates standalone. Each play fails less expensively because its feedstock, labor pipeline, settlement rail, and wealth-accumulation mechanism are already load-bearing on the other three. A failure in one play downshifts the operational load onto the others. A success in one play cross-amplifies.

This is the structural argument for Phase 0 executing all four pillars at once rather than sequencing them. The sequenced version (trash Year 1, bamboo Year 2, biochar Year 3, Plakèt Year 4) produces four disconnected pilots, each vulnerable to the extraction trap, each dependent on its own external funding cycle. The parallel version (all four on Day 1, even if barely) produces a single integrated stack where the pieces reinforce each other from the first quarter forward.

Dan and Wesley, personally, for 36 months. Four plays. One stack. All ignited Month 1. Phase 0 earns the right to Phase 1. See §4 for what the numbers look like when the stack is running, and §5 for the 20-year trajectory that a three-year hand-operation unlocks.

Financial Model & Bootstrap

Section 4 — Financial Model & 36-Month Bootstrap

Pratik × BARSS Ops Launch Brattle Portfolio · Section 4 of 9 · April 16, 2026

> ***Frame:*** *Phase 0 is the whole story in this section. Every number below is anchored to what Dan Tillias and Wesley Bertil personally execute in 36 months with $50-75K of bridge capital, igniting all four pillars even if barely. Phase 1 ($10-15M DEFINITIVE capital close, Year 3) is a consequence of Phase 0, not a precondition. Read the Y5 number as the payoff, but read the Y1 and Month 9-12 numbers as the thesis.*

4.1 The Phase 0 Bridge — $50-75K

The JV launches with a $50-75K bridge raise from warm, mission-aligned capital… friends and family, BARSS network, and a small slate of angel checks already in conversation. That number is down from a prior $150K ask, and the compression is not wishful, it is a consequence of the captive coalition economics specified in §3.

WHAT THE BRIDGE IGNITES SPECIFICALLY

LINE ITEM	BUDGET	IGNITES
Play 1 rickshaws (Pratik Trash)	$12-18K	4-6 cargo rickshaws, Cap-Haïtien metro routes
Play 3 biochar kilns	$8-12K	2-3 retort kilns in rotation, Limonade + Cité Soleil
Play 2 bamboo starter plot	$4-6K	0.5 ha at SOIL Limonade, species trials + nursery
Plakèt MVP engineering	$10-15K	Payroll + Pay MVP, Mannitaks integration, 1 contractor
Household bins (1,000-2,000 units)	$6-10K	Color-coded source-separation bins, metro rollout
Protected supervisor stipends	$28.8K/yr	Gilbert + Guy + Other Wesley, $1,200/mo × 2 stipends
Legal + accounting (JV + trust)	$8-12K	DE filings, cross-guaranty drafting, audit retainer
Ops float + contingency	$5-10K	Working capital buffer, first 3 months fuel + comms

The top of the stack is not software. It is kilns, bins, rickshaws, and stipends. That is deliberate. Phase 0 earns the right to the software stack by proving the physical infrastructure works.

WHY $50-75K IS DEFENSIBLE (NOT A LOW-BALL)

Three structural reasons the capital ask compresses on a vehicle that would ordinarily need $200-400K at this stage…

1. **Captive customer coalition eliminates CAC.** Plakèt Payroll onboards 300-400 users in Year 1 from the SAKALA + SOIL + HELP + Pratik + Konbit Lapen coalition. These are existing payrolls being rerouted, not customers being recruited. B2B SaaS in this space would normally carry a $200-650 CAC per Silver+ member. For the captive cohort, CAC is near zero. See §3.3 of the revenue model for the derivation.
2. **Zero recruiting cost on the youth cohort.** SAKALA supplies the 40-youth Year 1 workforce through Dan's existing program, with HELP scholars layered in as a secondary pipeline. No recruiting agency, no posted job spec, no onboarding overhead outside what SAKALA already carries.
3. **Land access is free to the JV.** SOIL provides the 0.5 ha Limonade plot for bamboo trials via Dan's board seat. No lease, no land-acquisition cost, no title risk. Kilns rotate through SOIL sanitation sites with no site-acquisition cost.

Those three structural cost displacements are why the Month 9-12 break-even math holds. See §4.5.

4.2 Revenue Streams, Y1 to Y5

All revenue flows through the JV's consolidated P&L. Every stream is captive-first… meaning Year 1 revenue is not a diaspora-acquisition projection, it is committed demand from the coalition. Upside comes from diaspora and metro density expansion on top.

STREAM	PRICING BASIS	Y1	Y2	Y3	Y4	Y5
Plakèt Payroll	$3 PEPM + 0.3% gross over $100K/mo	$60,000	$192,000	$391,000	$650,000	$972,000
Plakèt Directory — Individual	$50/yr	$6,250	$21,000	$47,250	$71,500	$94,500
Plakèt Directory — Silver	$400/yr	$18,000	$56,000	$112,000	$208,000	$310,500
Plakèt Directory — Gold	$1,200/yr	$12,000	$48,000	$114,000	$216,000	$324,000
Plakèt Directory — Platinum	$5,000/yr	$10,000	$30,000	$70,000	$200,000	$300,000
Plakèt Pay (Haiti-domestic tx)	0.3-0.5% take-rate	$25,000	$140,000	$400,000	$900,000	$1,500,000
Plakèt Verified (KYC)	$50-150/verification + tier fees	$41,250	$138,500	$282,000	$488,000	$723,000
Plakèt Library (subscription uplift)	Bundled in Silver+ tiers	$8,200	$28,000	$61,400	$102,000	$148,000
Pratik Trash tipping	Mayor MOU + household + commercial	$30,000	$180,000	$520,000	$980,000	$1,450,000
Pratik Biochar retail + wholesale	$0.60-$0.90/kg retail, offtake	$18,000	$110,000	$340,000	$720,000	$1,180,000
Pratik Bamboo sales	Y3+ from 0.5 ha scaling	$0	$0	$45,000	$180,000	$380,000
Carbon credits	Verra + Puro.earth biochar + bamboo	$0	$28,000	$95,000	$220,000	$480,000
Featured + data products + events + grant-broker	Mixed	$55,000	$193,000	$482,700	$760,000	$1,089,000
Restitution / philanthropic revenue	Y2+ aligned grants	$0	$125,000	$325,000	$680,000	$950,000
TOTAL REVENUE		**$283,700**	**$1,289,500**	**$3,285,350**	**$6,375,500**	**$8,580,000**

Rounding reconciles to the $8.58M Y5 anchor in the source model. The Plakèt-stack detail is from `Operations/Plays/04_Plaket/Research/03_Revenue_Models_and_Financials.md` §1.13. The Pratik-side streams (trash, biochar, bamboo, carbon) are consolidated from Plays 1-3 operating models with Y1 anchored to actual capex from §4.1.

Two notes on what is and is not in the top line...

- **Not in revenue:** worker-level violence-cost avoidance from Plakèt Pay adoption (estimated $150-720/merchant-year, doc 04 §2.5). This is structural value to the participant, not fee revenue to the JV, and so stays out of the P&L. It matters for §5 and §7 but not here.
- **Not in revenue:** Harvest Box. Harvest Box remains a SAKALA product and flows through its own sub-trust and P&L. Firewalled from the JV per §5.

4.3 Revenue Distribution Waterfall — 40/40/20

Operating surplus, not gross revenue, is what splits. The waterfall runs gross revenue → top-of-waterfall overhead → net operating surplus → 40/40/20 split.

TOP-OF-WATERFALL OVERHEAD (PAID FIRST, OFF THE TOP)

LINE	NOTES
Operating expenses	Payroll for non-founder staff, hosting, rent, fuel, consumables, insurance
Tax reserve	25% of positive EBITDA, escrowed quarterly per Delaware LLC federal filings
Critical debt service	Bridge note repayment schedule if debt-structured, otherwise $0
Audit + compliance retainer	Fon Kominote SAKALA master trust audit, annual 990-PF, per-sub-trust 5227

Only what remains after these four lines splits 40/40/20.

THE 40/40/20 SPLIT

BUCKET	ALLOCATION	ROUTES TO
40% Gold Reserve	40% of net operating surplus	Endeavor-specific Gold Sub-Trust under Fon Kominote SAKALA master (fractal architecture, §4.7)
40% Salary	40% of net operating surplus	Dan Lifetime Stipend senior + Wesley parity + protected supervisors + worker patronage + household tier dividends
20% Initiatives	20% of net operating surplus	Operating reserve + Pratik growth capex + new vertical seed + grant-matching pool

Salary-bucket order of operations matters. Dan's Lifetime Stipend is senior (guaranteed payment via K-1, perpetual partnership per the JV agreement). Wesley draws parity. Protected supervisors (Gilbert, Guy, Other Wesley) next. Worker patronage and tier-1 member dividends are last in line but grow fastest in absolute terms as revenue compounds. By Year 5 the tier-1 dividend pool carries $246K across 820 enrolled Silver+ members (base case).

The 20% Initiatives bucket is the growth-capex line. Phase 1 capital close in Year 3 doesn't replace this bucket... it layers on top of it.

4.4 Payroll Pay-Split — 60/25/15

Inside Plakèt Payroll, each worker's paycheck splits three ways by default, with worker-adjustable rails within minimum and maximum bands.

SLICE	DEFAULT	MECHANISM	PURPOSE
Gourde (take-home)	60%	MonCash transfer, daily spend	Groceries, school fees, tap-tap fare, immediate household needs
USDC (savings)	25%	Plakèt Pay wallet, stable-value	Depreciation-proof savings. Gourde loses 12-28% per year to inflation. USDC holds against USD.
Lò SAKALA (long-term wealth)	15%	Auto-allocated to worker's endeavor sub-trust	Fractional gold position, quarterly patronage, dividend over time

WORKER-ADJUSTABLE RAILS

- **Minimum gourde:** 50% (take-home floor, worker cannot starve their household for savings)
- **Maximum Lò allocation:** 30% (prevents over-concentration in illiquid long-term position during early tenure)
- **Default sticky:** once set, the split holds until the worker changes it. Onboarding defaults to 60/25/15.

PAYROLL-LINKED LOANS (THE GATEWAY TO CREDIT)

The payroll hook underwrites a credit product that does not exist in Cap-Haïtien metro outside informal kamocha networks...

PRODUCT	APR (PLAKÈT)	APR (KAMOCHA INFORMAL)	SPREAD
Payroll-linked short-term	6-10%	20-50% (monthly compounding)	10-44 pp saved by worker

The loan margin is modest in absolute dollars (est. $8K Y1 → $135K Y5) but the structural effect is massive. Every worker on Plakèt Payroll has a documented income stream, a KYC L1 profile, and a Lò SAKALA collateralizable position. That combination unlocks credit that would otherwise route through loan sharks. The JV captures a fee. The worker captures escape velocity.

4.5 P&L Projection — Conservative / Base / Upside (Y1 to Y5)

Three scenarios modeled. Base case is the anchor. Conservative is what happens if the coalition delivers at 50% rate. Upside is what happens if one of the three expansion levers hits (white-label, major grant, metro density earlier than plan).

FULL-YEAR P&L, THREE SCENARIOS

LINE	SCENARIO	Y1	Y2	Y3	Y4	Y5
Revenue	Conservative	$210K	$720K	$1.42M	$2.56M	$3.68M
	Base	**$284K**	**$1.29M**	**$3.29M**	**$6.38M**	**$8.58M**
	Upside	$520K	$1.95M	$5.40M	$10.80M	$15.80M
EBITDA	Conservative	($75K)	$90K	$420K	$840K	$1.35M
	Base	($67K)	**$400K**	**$1.50M**	**$2.90M**	**$4.67M**
	Upside	($40K)	$730K	$2.48M	$5.60M	$8.90M
EBITDA margin	Conservative	-36%	13%	30%	33%	37%
	Base	-24%	**31%**	**46%**	**45%**	**54%**
	Upside	-8%	37%	46%	52%	56%
Gold Reserve (40%)	Base	$10-15K buffer	$112K	$444K	$869K	$1.40M
Bridge required	Base	**$50-75K**	$0 (self-funding)	$0	$0	$0
Break-even (EBITDA+)	Base	**Month 9-12**	—	—	—	—

Numbers are rounded for portfolio presentation. Source model in `Operations/Plays/04_Plaket/Research/03_Revenue_Models_and_Financials.md` §2.4 expanded base case. Pratik-side P&L consolidated from Plays 1-3 operating models.

WHAT YEAR 1 ACTUALLY LOOKS LIKE

Base case Year 1 revenue of ~$284K against $175K operating cost yields a ($67K) EBITDA and a Month 9-12 break-even. The $50-75K bridge covers the gap. Net-net... by Month 12 the JV is running on its own revenue, with a $10-15K Gold Reserve buffer already accumulated in the Fon Kominote SAKALA master trust and the first endeavor sub-trust issuances to the Year 1 worker cohort.

That is the full thesis. Everything from Year 2 forward is the compound curve on a proven base.

4.6 Decision Gates

Four gates structure the 36 months. Each gate is a yes/no for both parties... Dan and Wesley stop and evaluate, funders stop and evaluate. If a gate fails, the JV re-plans. If a gate passes, the next tranche of capital or operational scope unlocks.

G1 — MONTH 6

Triggers the first external validation milestone. Not a capital gate, an operating-legitimacy gate.

CONDITION (ANY ONE TRIGGERS PRIMARY)	STATUS TO PASS
RCL pilot contract signed	Y/N
Mayor Angie MOU signed (municipal trash route)	Y/N
1,000 bins distributed	Y/N
AND BSFL bed or biochar kiln producing	Y/N
AND Bin manufacturer locked (supplier contract signed)	Y/N

Pass = at least one of the top three plus both of the AND conditions. If G1 fails, the JV pauses Phase 0 expansion and returns to the coalition for diagnosis.

G2 — MONTH 12

The break-even gate. This is where the revenue line crosses the operating-cost line and the bridge stops being required.

CONDITION	TARGET
Organic waste processed (cumulative)	50+ tons
Households enrolled (active)	3,000
First biochar retail sales completed	Y/N
Active collectors (paid through Plakèt Payroll)	30+
Audited unit economics on 4 products	Y/N
First sub-trust Lò SAKALA issuance (any endeavor)	Y/N

Pass = all six. This is the hardest gate because it requires every pillar to be operating, and the sub-trust issuance is the legal proof-of-function for the fractal architecture.

G3 — MONTH 24

The acceleration gate. Pre-positioning for the Phase 1 raise begins here.

CONDITION	TARGET
Organic waste processed (cumulative)	200+ tons
Households enrolled	6,000
Feed LOI (BSFL frass or offtake)	Signed
Ministry frass registration	Filed
Payroll captive base	300+ workers
First joint grant LOI circulated (JV + coalition)	Circulated

Pass = all six. A miss on any single condition is recoverable inside the next 6 months but compresses the G4 window.

G4 — MONTH 36

The unlock. This is the gate that turns Phase 0 into Phase 1.

CONDITION	TARGET
Organic waste processed (cumulative)	435+ tons
Households enrolled	10,000
Audited operating data (consecutive months)	12+
RCL contract renewed (or equivalent anchor)	Y/N
Municipal contract monetized (Mayor MOU converted)	Y/N

Pass = all five, with the operating data being the non-negotiable. **This gate unlocks the DEFINITIVE Phase 1 capital close... $10-15M stacked from IFC + IDB Invest + Canada BCF + K-GRID, structured against the Solengy mirror template proven in 2025.**

4.7 Fractal Sub-Trust Accumulation (Y1-Y5)

The 40% Gold Reserve bucket does not flow into a single commingled pool. Each endeavor spins up its own Gold Sub-Trust under the Fon Kominote SAKALA Delaware irrevocable charitable master. One participant cohort per sub-trust. One set of issuance rules per sub-trust. One independently auditable position per sub-trust.

PROJECTED LÒ SAKALA ACCUMULATION, Y1-Y5 (BASE CASE)

SUB-TRUST	PARTICIPANT COHORT	Y1	Y2	Y3	Y4	Y5 CUMULATIVE
Pratik Trash Sub-Trust	Collectors + route operators	$2,500	$28K	$115K	$260K	**$440K**
Pratik Reforestation Sub-Trust	Bamboo coop farmers	$0	$8K	$42K	$118K	**$230K**
Pratik Charcoal Sub-Trust	Kiln operators + biochar coop	$3,000	$22K	$95K	$200K	**$345K**
Plakèt Directory Sub-Trust	Verified diaspora businesses	$9,000	$85K	$180K	$290K	**$564K**
Plakèt Payroll Sub-Trust	Payroll-enrolled workers	$5,500	$42K	$110K	$185K	**$342K**
TOTAL Gold Reserve accumulated		**~$20K**	**~$185K**	**~$542K**	**~$1.05M**	**~$1.87M**

At $97/gram LBMA PM Fix (assumed constant for accumulation math, 6% appreciation applied separately for reserve value), the Y5 cumulative allocation is approximately **19.2 kg of allocated physical gold, held via LBMA-compliant vault partner** (Loomis, Brinks, or BullionVault segregated), with segregated sub-trust ledgers under the master instrument.

QUARTERLY PATRONAGE DIVIDENDS (START Y2)

Each sub-trust distributes patronage dividends quarterly from the salary-bucket tier-1 pool, calibrated to the participant's contribution (subscription-months for Directory, kilograms processed for Trash, kiln-hours for Charcoal, bamboo-meters-planted for Reforestation, payroll-months for Payroll).

YEAR	ELIGIBLE MEMBERS (AGGREGATE)	AVG ANNUAL DIVIDEND	QUARTERLY CHECK
Y2	280	$45	$11
Y3	640	$95	$24
Y4	1,200	$165	$41
Y5	1,850	$260	$65

By Y5 a mature cooperative member with positions in two or three sub-trusts sees **$75-300/yr in dividend income on top of wages**, treated as Subchapter T patronage dividends (same mechanism REI and Organic Valley use). These are not large in absolute terms, but they establish the legal and cultural principle that **members are co-owners of the surplus, not customers of a vendor**. That principle is what lets the JV describe itself as a modernized Konbit inside Haiti, a steward-owned enterprise to impact investors, and a hybrid social enterprise to DFIs... all three framings accurate because the cap table actually does the work.

4.8 The Unlock — Year 3 DEFINITIVE Phase 1 Capital Close

Thirty-six months of audited operating data. Signed anchor contracts with RCL or the Cap-Haïtien municipality. Philanthropic stack closed at Year 2 (restitution-framed from aligned foundations). First joint grant LOI from the coalition circulated. All four pillars operating. First sub-trust Lò issuances on record. Month 9-12 break-even met. Month 24 acceleration gate passed.

That stack is the ticket. It buys entry to a DFI structure that conventional Haiti-development vehicles cannot access...

SOURCE	TARGET CHECK	INSTRUMENT	PRECEDENT
IFC	$3-5M	Equity + concessional debt	Haiti portfolio 2024-2025
IDB Invest	$3-5M	Blended finance senior debt	Solengy mirror, 2025
Canada BCF	$2-3M	First-loss concessional	K-GRID structure
K-GRID co-investors	$2K3M	Follow-on equity	Solengy template
TOTAL Phase 1	**$10-15M**	Blended-capital stack	

Phase 1 flows into the JV as growth capital, deployed against the integrated Cap-Haïtien infrastructure buildout (full metro trash routing, industrial-scale biochar, bamboo outplanting at scale, Plakèt metro-wide merchant network, Fon Kominote SAKALA endowment seeding).

Beyond Phase 1, the full-build trajectory runs to **$128-208M of integrated Cap-Haïtien infrastructure** over the 20-year horizon. That stack unlocks post-Year 3 and is developed in §8 of this portfolio alongside the Haiti Master 20-Year Playbook.

None of that matters if Phase 0 doesn't deliver. The $50-75K is where everything starts. The 40/40/20 waterfall, the 60/25/15 pay-split, the five sub-trusts, the four gates, and the Month 9-12 break-even are the Phase 0 proof. Phase 1 is the compound curve on that proof.

Section 4 of 9. Pratik × BARSS Ops Launch Brattle Portfolio. April 16, 2026. Base-case financial model sourced from `Operations/Plays/04_Plaket/Research/03_Revenue_Models_and_Financials.md` *§1.13 (revenue summary) and §2.4 (expanded base P&L). Pratik-side streams consolidated from Plays 1-3. JV structure per* `Harvest_Box_JV/JV_Vehicle_Summary_5pg_DanCall_2026-04-16.md`*. Perpetual partnership. Reciprocal cross-guaranty. Covenantal not transactional.*

20-Year Trajectory & Partners

Section 5 — 20-Year Trajectory & Partners Coalition

Pratik × BARSS Ops Launch Brattle Portfolio, Section 5 of 9 Date: April 16, 2026 **Prepared by:** BARSS LLC (Wesley Bertil) + Impact 480 LLC (Daniel Tillias)

> ***Framing:*** *The 20-year trajectory begins with Phase 0. Dan and Wesley, 36 months, all four pillars ignited even if barely. Every subsequent stage, Phase 1 infrastructure capital, Stage 2 replication, Stage 3 regional integration, Stage 4 legacy, depends on Phase 0 first producing twelve months of audited operating data. Without that proof, nothing downstream unlocks. Read this section as a stacked dependency graph, not as a marketing timeline.*

5.1 The Four-Stage 20-Year Arc

The trajectory is four stages, bracketed by a Phase 0 ignition that sits inside and under Stage 1. Phase 0 is not a separate stage in the conventional sense. It is the 36-month hand-operation that generates the evidence base required for Stage 2 capital to be legible to institutional funders. Stage 1 activity (the Pratik Limonade hub, the RCL pilot, Mayor Angie contract revival) happens inside Phase 0. But Phase 0 is the analytical unit that matters for this portfolio, because it defines what Dan and Wesley personally produce before a single dollar of DFI infrastructure capital closes.

PHASE / STAGE	YEARS	CAPITAL ENVELOPE	PRIMARY ACTIVITY	UNLOCK CRITERION
Phase 0 — Dan + Wesley Bootstrap	0-3 (months 1-36)	$50-75K bridge	Four pillars ignited even if barely. 40 SAKALA youth on trash routes, 0.5 ha bamboo planted at SOIL Limonade, 2-3 biochar kilns in rotation, 300-400 captive Plakèt Payroll users, first Lò issuance, Mayor Angie MOU, RCL Labadee pilot offtake.	12 months audited operating data across all 4 pillars. This is the artifact.
Stage 1 — Pratik Limonade Operational	1-2 (inside Phase 0)	Bootstrap + RCL pilot + philanthropic stack ($1-3M cumulative)	Single hub, 4-product braid (BSFL / biochar / frass / SOIL-partnered compost). 10,000 households enrolled by Year 2. 435-515 tons cumulative throughput. RCL anchor contract signed and renewed. Municipal contract monetized at $50-150K/yr.	Master Playbook Part I §7 Gate 4: 7 validators at Month 24 trigger Stage 2 raise.
Stage 2 — Infrastructure Scale	3-7 (post-DEFINITIVE Phase 1 close)	$30-50M institutional + $10-50M/yr operational	VLR rail Phase 1 construction begins Year 5. Multi-hub Pratik replication (10 hubs by Year 10). 143 MWp solar canopy live. Bamboo economy scales to 5,000+ ha on 15-year rotation. GCF flood + reforestation accreditation. IDB Lab multi-hub line.	Year 5 Gate: 3+ hubs operational, rail Phase 1 IFC term sheet closed, aggregate ops revenue ≥$15M/yr.
Stage 3 — Regional Integration	8-15	$100-200M blended DFI + reparations	CARICOM replication (first non-Haiti state MOU Year 8, three states by Year 15). Grand Blue Line coalition wiring Mexico + Caribbean + Liberia. 135 km rail live. Caribbean white-label of Plakèt. First reparations capital monetization (Citi 1914, Credit Mutuel-CIC). Diaspora bond / coop share offerings.	Year 10 Gate: ≥1 non-Haiti CARICOM operation, DFI revolving line established, cooperative endowment seed ≥$10M.
Stage 4 — Legacy & Sovereignty	15-20	$40-80M net new (endowment layer)	Endowment maturation (target ≥$50M principal by Year 15, higher by Year 20). Succession plan ratified. UWI CRR Applied Extraction Economics program embedded. Foundation holding structure migrated from JV operating vehicle. Theta inside Cap-Haïtien cooperative footprint below 0.20. Dan's grandchildren and HELP's 2050 graduates inherit a structure they did not have to build.	Year 15 Gate: endowment ≥$50M, succession ratified, ops revenue self-sustaining at ≥100% of opex.

Total 20-year capital envelope floors at $178M and ceilings at $342M. The base case treats reparations capital as optional upside. If zero reparations flow, the 20-year total compresses to roughly $120M and the trajectory still holds. Cross-reference §4 for the financial model detail and the Stage 1 burn schedule.

5.2 The Phase 0 → Phase 1 Transition

Phase 0 is not undifferentiated. It breaks into three 12-month segments, each with a specific deliverable that unlocks the next one.

Months 1-12 (Year 1): Ignition. Dan and Wesley personally in the field. BARSS LLC filed April 15. Impact 480 LLC operational. JV term sheet signed, Operating Agreement and ancillary docs executed by Month 3. Four pillars light up inside the same 90-day window even if each one starts at hand-scale. Pillar 1 (Trash): 40 SAKALA youth trained, first household route live by Month 6, RCL Labadee pilot offtake pickup by Month 6. Pillar 2 (Reforestation): 0.5 ha bamboo planted at SOIL Limonade by Month 4. Pillar 3 (Charcoal Alternatives): first biochar kiln commissioned by Month 5, retail test batch at Cap-Haïtien by Month 9. Pillar 4 (Plakèt): card issuance begins Month 3, 300-400 captive payroll users across SAKALA + SOIL + HELP + Pratik + Konbit Lapen cycling wages by Month 6. First Lò issuance (1 Lò = 1 gram gold) under the Fon Kominote SAKALA master trust by Month 9. Mayor Angie MOU signed by end Q2. Nothing waits.

Months 13-24 (Year 2): Scale proof. 3,000 households enrolled by Month 18. RCL pilot contract renewed or scaled. Mayor Angie contract monetized. First carbon pre-sales on biochar futures (Year 2+ gate). Feed offtake LOI with at least one Haitian poultry buyer. Frass Ministry of Agriculture registration filed. First Kellogg / Ford / IDB Lab / Rockefeller grants land at $500K-1M each. AFUWI designated research fund activated via Sisters of St. Joseph + Hendrickson. TapTap Harvest Box subscription engine crosses 1,200 active subscribers (the Year 2 Gate threshold from the Master Playbook Capital Roadmap). Audited 12-month operating data package finalized by Month 24. This is the artifact the whole trajectory depends on.

Months 25-36 (Year 3): Capital close. Data package goes to IFC, IDB Invest, and the Canada Blended Climate Finance facility. Phase 1 LOIs negotiated. IFC term sheet circulated. GCF accredited-entity work already 18 months into its 24-30 month runway. Caribbean Development Bank conversation begins. At Month 36, **DEFINITIVE Phase 1 ($10-15M) closes**. All subsequent stages now funded.

The Phase 0 ask in §1 is $50-75K. The leverage at Month 36 is 200x. That leverage is only legible to institutional capital because Dan and Wesley have produced three years of documented tonnage, documented captive demand, documented unit economics, and documented survival through the worst operating environment in the Western Hemisphere. Foundations fund evidence, not plans. DFIs require a year of audited operating history plus a government counterparty. Reparations capital requires an academically validated framework plus at least one filed claim. Phase 0 is the factory that produces the inputs each of these funder universes requires.

Cross-reference §3 for the four-pillar flywheel operational detail and §4 for the unit economics by pillar.

5.3 The Partners Coalition

The coalition is fifteen partners, each with its own mandate, audience, and capital base, bound together by a stack of bilateral instruments rather than by a merger. That design is load-bearing. Consolidation would collapse the firewalls that make each partner individually defensible. The table below reflects status as of April 15, 2026.

PARTNER	ROLE	CURRENT STATUS	PHASE 0 ASK (YR 0-3)	STAGE 2-4 EVOLUTION (YR 3-20)
BARSS LLC	IP holder (EEDTM, Theta, brand); research + grant engine; 50% JV member	**Filed April 15, 2026.** Delaware LLC formation complete.	Execute IP License + Services Agreement to JV. File EEDTM / Theta Constant / BARSS trademarks (ITU).	Spin out endowed chair or academic program Yr 7-12. Research-side firewall stays intact.
Impact 480 LLC	Dan's operating vehicle; 50% JV member; Haiti ground ops	Pre-registered by Dan (home state). Firewalled from SAKALA and from Fatraka.	Execute parallel Services Agreement. Staff up waste ops. Absorb Mayor Angie contract.	Absorb multi-hub Pratik replication. Potential vehicle for expanded waste operations beyond Nord.
SAKALA Community Center	23-year Haitian NGO + US 501(c)(3); youth + composting + community hub	Operational since 2003. Jethro Sereme as Administrateur. Existing funders (Indriy, E Power, Middle Knight, Nancy Young) untouched and not commingled with JV revenue.	Services Agreement with JV for fulfillment on SAKALA land. 40+ youth onto Pratik routes. No equity flow. No commingling.	Remain program site. Receive patronage dividends as cooperative member, not as owner. SAKALA firewall is load-bearing.
SOIL Haiti	Konpòs Lakay composting on 3.3-acre government-leased Limonade plot adj. Mouchinette CMVW	Operational. **Daniel Tillias is Board Co-Chair.**	Formalize compost offtake LOI. Tri-party MOU with JV and SAKALA. Co-design bin-to-compost pipeline.	Joint CMVW expansion. Shared lab + certification infrastructure. Federated composting cooperative Yr 5-10.
Royal Caribbean Group (Case #27)	$88.5B market cap; Liberia FOC; Labadee lease; Brattle exposure $15-30B	**No signed relationship yet.** Dan's 20-year personal relationship with RCL president is the opening channel. Brattle Case #27 report built as door-kicker.	Open door via Dan. Dual-track offer: Sovereignty (Labadee returned) or Litigation (Case #27 filed). Secure anchor offtake pilot 100-200 tons/yr at $50-200/ton tipping. Negotiate restitution-line capex contribution $200-500K.	Scale to 200+ tons/yr at $100-200/ton. Waste offtake becomes permanent line. Cruise-port composting. Constructive restitution pathway via JV.
HELP (Haitian Education & Leadership Program)	30-year NY 501(c)(3); 372 alumni; $25M-by-2030 campaign; agronomy track	**Conor Bohan intro to Caroline Bernal-Silva April 15, 2026.** No MOU yet. Affiliation Prospectus drafted.	Countersign Affiliation MOU. Internship pipeline to JV. Joint Kellogg Foundation ask. "BARSS HELP Rate" service tier for HELP ambassadorial donor base.	Primary workforce pipeline. Co-branded scholarship fund. Joint development officer by Year 5. HELP's 2050 graduates inherit operational roles.
UWI Centre for Reparation Research (CRR)	Prof. Sonjah Stanley Niaah, Director; Applied Extraction Economics program	**Active since November 2025.** Feb 25 commitment to share EEDTM with CARICOM Secretariat. April 7 follow-up awaiting response.	Execute Research Partnership Agreement. SALISES PhD/RPL pathway for Wesley. 25 franchise sites as field labs.	Multi-year research grant. Endowed chair potential. CRR becomes external validator for Theta updates. Academic scaffolding for CARICOM replication.
AFUWI (American Friends of UWI)	501(c)(3) donor channel for UWI	**Inquiry email drafted to Ann Marie Grant, not yet sent.**	Establish designated fund for CRR Applied Extraction Economics. Tax-deductible pathway for Sisters of St. Joseph + Hendrickson Foundation.	Primary US donor conduit for the research program. Potential restricted endowment by Year 10.
CNHRR US Support Committee	Haiti national reparations commission, US-side	**Wesley designated Secrétaire Technique by President Jean-Jacques, February 2026.** Official institutional role.	Institutional Haiti-side political cover. Formal channel for defendant notice letters on Citi 1914 and Credit Mutuel-CIC.	Evolve with Haitian political cycles. Remain the legitimacy anchor on the sovereignty track. Deploy reparations capital into cooperative capitalization rather than sovereign debt service.

PARTNER	ROLE	CURRENT STATUS	PHASE 0 ASK (YR 0-3)	STAGE 2-4 EVOLUTION (YR 3-20)
CARICOM Reparations Commission	Regional reparations body; 10-point plan	Indirect access via Stanley Niaah → Secretariat. No direct relationship.	Present EEDTM costing to CHOGM PMSC review.	Caribbean institutional alignment. Potential official technical advisor status Year 5+. Input to $30-70M European institutional reparations tranche.
Mayor Angie — Cap-Haïtien	Municipal authority; waste contract	**Political capital available.** Daniel held prior municipal waste contract. Warm relationship.	Revive contract under Impact 480. Signed MOU by end Q2 Year 1. Monetize Year 2 at $50-150K/yr. Anchor for Nord bin rollout.	Template for replication across communes. Municipal revenue share model. Legal standing vis-à-vis SNGRS / PROPUBLIC SAM.
BambouFacile × Jupille	Bamboo supply partner	**LOI in place.**	Scale supply for bin program and reforestation pillar.	Vertical integration or long-term offtake. Potential JV equity stake Year 5+. Bamboo economy scales to 5,000+ ha.
Campus Henry Christophe de Limonade	USAID Ag Tech Park; Daniel is former president	**Warm relationship, no formal MOU.**	Research site agreement. Internship placements. Soil lab access.	Joint applied research. Co-certification with UWI SALISES. Agronomy pipeline into HELP workforce.
Fon Kominote SAKALA (master trust)	Delaware irrevocable charitable master trust; 1 Lò = 1 gram gold-backed	**Filed per DEFINITIVE Section 14.** Fractal sub-trust stack under 12 Del. C. § 3801.	Issue first Lò tokens Month 9. Spin up Pratik Trash Sub-Trust first, then Pratik Reforestation and Charcoal Sub-Trusts. Plakèt Directory and Plakèt Payroll Sub-Trusts follow as Mannitaks fintech integration clears.	Each endeavor gets its own sub-trust as it launches. By Year 10, 5-7 active sub-trusts. By Year 15-20, federation into a secondary trust-of-trusts layer once the stack exceeds ~8 active sub-trusts.
Mannitaks / MoneyTalks	Chris Cherubin fintech; Plakèt rails partner	**MOU in place.** Amendment 1 + 2 pending.	Execute amendments. Integrate Plakèt card issuance and vendor POS rails. Captive payroll cycling for 300-400 Day 1 users.	Scale to full metro vendor network. Caribbean white-label Plakèt replication Year 8+. Regional payment rail under Grand Blue Line coalition.

Sub-trust beneficiary discipline. The partner table lists operating entities. Separate from the partner layer, the Fon Kominote SAKALA master Delaware charitable trust holds the mission-aligned gold corpus and spawns endeavor-specific sub-trusts. Participants, SAKALA youth on Pratik routes, bamboo field workers, Plakèt Payroll users, future rail ops staff, are beneficiaries of the relevant endeavor sub-trust, not of the partner institutions directly. SAKALA the NGO (23-year community center) is a program partner. Fon Kominote SAKALA (Delaware master trust) is a distinct legal entity. The naming overlap is deliberate. The legal wrappers are separate and must not be conflated in paperwork. See §3 and §7 for detail.

5.4 The 20-Year Vision — Cap-Haïtien 2046

Twenty years from now, if this playbook executes, Cap-Haïtien is a metro of roughly 650,000 people in which the waste collection, the public transit spine, the distributed solar grid, the municipal compost operation, the bamboo construction supply chain, and the port-adjacent light manufacturing are all held by cooperatives whose members are the workers and the residents they serve. The hillsides above Milot and Dondon are bamboo-reforested on a fifteen-year rotation with carbon offtake contracts to European municipalities underwriting the rotation cycle. The diaspora supply chain runs both directions… Haitian-grown moringa, cacao, vetiver, and bamboo charcoal moving north to the 975,000 diaspora households already mapped across 1,420 US ZIPs, and member-patron dividend flows moving south through the same corridor in reverse, gradually replacing the remittance economy with a cooperative-patron economy. CNHRR reparations capital, CARICOM-negotiated, flows into domestic cooperative capitalization rather than sovereign debt service. The Haitian state is smaller and less extractive than it is in 2026 because the cooperative layer has absorbed the functions the state failed at for forty years. BAM BAM is either criminally adjudicated or economically obsolete. Probably both. Dan's grandchildren are the operators. HELP's 2050 graduates are the engineers and agronomists and medics. UWI CRR is the research home. The Applied Extraction Economics program is teaching Theta as measurement rather than metaphor. And the number that justifies the twenty years: **Theta, measured inside the Cap-Haïtien**

cooperative footprint in 2046, is below 0.20. The capture rate flipped from 0.80 to 0.20 by the same math that defined the extraction, instrumented in paperwork rather than promised in prose.

5.5 Why Phase 0 Must Happen First

Everything above collapses if Phase 0 fails to produce twelve months of audited operating data. Not metaphorically. Structurally. The Master Playbook Capital Roadmap funder-sequencing logic (§6 of Part IX) spells it out: every subsequent funder class requires something Phase 0 produces. Foundations fund evidence, not plans, so Kellogg / Ford / Rockefeller need Pratik producing Year 1 data before they write. DFIs require a year of audited operating history plus a government counterparty, so IFC / GCF / CDB need the 12-month package plus the Mayor Angie contract. CARICOM institutional capital follows infrastructure, so it needs Stage 2 rail and multi-hub under construction, which needs the Phase 1 close at Month 36, which needs the Phase 0 artifact. Reparations capital requires an academically validated framework plus at least one filed claim, so the Citi 1914 monetization needs Darity and Craemer and Volcy endorsement plus a live docket plus evidence that a credible receiving vehicle exists, which is CNHRR plus Fon Kominote plus the JV plus Phase 0 operating data. Every single downstream dollar traces back to the 36-month hand-operation.

RCL first is a constraint, not a preference. Dan's 20-year personal relationship with the RCL president is the only warm door into $88.5B of market cap facing $15-30B of Case #27 exposure, and the anchor contract is both the Phase 0 revenue line and the Phase 1 credibility signal. If RCL does not sign, every subsequent funder-class is harder, slower, and more expensive. If RCL signs, the Phase 0 artifact gets produced on schedule and the Phase 1 close at Month 36 is legible.

The entire 20-year trajectory sits on the shoulders of two people executing four pillars simultaneously starting Month 1. No hired management layer. No grant cycle to wait on. No board to convene. Dan and Wesley, bound by a perpetual JV with reciprocal lifetime support and a cross-guaranty between BARSS LLC and Impact 480 LLC, running trash routes and planting bamboo and firing kilns and issuing Plakèt cards while simultaneously closing the RCL pilot and reviving the Mayor Angie contract and landing the first philanthropic tranche and filing the first sub-trust and producing the first Lò. That is the Phase 0 ask. $50-75K. 36 months. Four pillars ignited even if barely.

Phase 0 IS the enabler. Without it, nothing else unlocks. With it, a two-person hand-operation earns the right to deploy metro-scale infrastructure across a 650,000-person city for the next two decades.

Cross-reference: §3 (Four-Pillar Flywheel), §4 (Unit Economics & Capital Stack), §6 (DEFINITIVE Phase 1 Leverage Analysis), §7 (Fractal Sub-Trust Architecture).

Mission Deck

Section 6. The Mission Deck

Screen-ready slides. Each one quotable. Phase 0 focused. 36 months, 2 people, 4 pillars.

Slide 1. Title

Pratik × BARSS Ops

Dan and Wesley form a perpetual Delaware LLC that saves Haiti.

- Impact 480 LLC (Dan Tillias) × BARSS LLC (Wesley Bertil)
- Perpetual JV, no exit, covenantal not transactional
- Cap-Haïtien operations, Delaware legal home
- Phase 0 starts Month 0 with two people

> *"A security program funded by infrastructure revenue."*

Slide 2. The Problem

Haiti's economy is bleeding in five places at once.

- HTG has lost 62% of its value since 2019
- Cash insecurity... ATM queues are kidnapping targets
- No domestic digital payment rail for Haitian merchants
- 98% deforestation, charcoal demand unchanged
- Extraction Theta = 0.80, validated across 20 cases

> *Every pillar in this deck maps to one of these five bleeds.*

Slide 3. The Mission

Save Haiti by inverting the extraction math.

- Theta measures elite capture... we target Theta < 0.20
- Not charity, not aid, not remittances
- Cooperative ownership from Day 1
- Gold reserve denominated in grams, not gourdes
- Surplus stays in Cap-Haïtien

> *"If the math says elites take 80, we build the system where communities keep 80."*

Slide 4. What We Are (Pick Your Audience)

Same entity, four names, four audiences.

- **Konbit** … for Haitian community, Kreyòl speakers, diaspora
- **Steward-Owned Enterprise** … for impact investors, Zebras Unite
- **Public Benefit LLC** … for lawyers, Delaware filings, IFC
- **Hybrid Social Enterprise** … for foundations, DFIs, grant officers

> *One structure. Four dialects. Zero compromises.*

Slide 5. The Legal Structure

Perpetual Delaware JV. No buyout. No dissolution clause.

- BARSS LLC 50% / Impact 480 LLC 50%
- K-1 guaranteed payments… lifetime stipend to Dan
- Reciprocal cross-guaranty between entities
- Delaware Trust Code §3801 sub-trusts per pillar
- Paperwork lives at `11. Strats/Projects/Harvest_Box_JV/`

> *Wesley commits for the rest of both their lives. That is the contract.*

Slide 6. Phase 0 — The 36-Month Ignition

Dan and Wesley. Personally. Four pillars. Barely funded.

- $50-75K bridge (grant + founder loans + diaspora)
- 2 full-time co-founders, 8-12 Haitian staff by Month 18
- Every pillar ignites, even if barely
- No IFC, no VC, no DFI… not yet
- Month 24 audit triggers Phase 1 unlock

> *Phase 0 is the proof. Phase 1 is the scale. Do not skip Phase 0.*

Slide 7. Pillar 1 — Trash

40 youth, Limonade, rickshaw-build certification.

- SAKALA youth paid gourdes + USDC + Lò
- Certified rickshaw-build training… transferable skill
- Organic waste becomes biochar feedstock
- Feeds Pillar 3 at zero marginal cost
- Monthly revenue Month 6, break-even Month 12

> *Trash is not waste. Trash is Pillar 3's input.*

Slide 8. Pillar 2 — Reforestation

0.5 hectare bamboo Year 1. Six revenue streams. 25,000 ha Year 10.

- Bamboo grows in 3-5 years, not 30
- Construction, scaffolding, biochar, textile, charcoal, carbon credits
- Carbon credit revenue = bridge cash while bamboo matures
- Land tenure via cooperative, not individual title
- Feeds Pillar 3 and Pillar 1 rickshaw frames

> *The only sector where growth literally reverses climate damage.*

Slide 9. Pillar 3 — Charcoal

Biochar at price parity. Wood charcoal dies by market force, not by decree.

- $0.40/kg retail price point matched
- Input: Pillar 1 organic waste + Pillar 2 bamboo offcuts
- Kiln cost < $8K per unit, 3 units by Month 18
- Haitian households switch because it is cheaper AND cleaner
- Deforestation reverses as side effect

> *No ban. No subsidy. Just a better price.*

Slide 10. Pillar 4 — Plakèt

Five sub-modules. Haiti's domestic commerce rail.

- **Verified** … merchant KYC
- **Library** … open product catalog
- **Pay** … USDC/HTG/Lò settlement
- **Directory** … buyer-to-seller discovery
- **Payroll** … 60/25/15 split automation

> *Moncash moves money. Plakèt moves commerce.*

Slide 11. The Captive Customer Launch Coalition

300-400 Day 1 users before we open the door.

- **SAKALA** … youth payroll, waste collection
- **SOIL** … biochar offtake, EcoSan franchise payroll
- **HELP** … university scholarship stipend disbursement
- **Pratik** … Fatraka waste operations
- **Konbit Lapen** … rabbit cooperative payroll

> *"We don't need VC. We have Dan's relationships and our own ventures as Day 1 customers."*

Slide 12. Fractal Konbit Architecture

Every endeavor gets its own gold sub-trust.

- **Lò SAKALA** ... SAKALA's share of gold reserve
- **Lò Fatraka** ... Fatraka's share
- **Lò HELP** ... HELP's share
- **Lò Konbit Lapen** ... the rabbits get gold too
- Delaware Trust Code §3801 series LLC structure

> *Fractal. Self-similar at every scale. Konbit all the way down.*

Slide 13. The 40/40/20 Split (Enterprise Level)

Every dollar of surplus, split the same way.

- **40% Gold Reserve** ... grams, not gourdes, stored offshore
- **40% Salary** ... cooperative payroll
- **20% Initiatives** ... reinvestment into new pillars

> *Forty percent gold is not conservative. It is counter-extraction.*

Slide 14. The 60/25/15 Split (Payroll Default)

Every worker's paycheck, three currencies.

- **60% Gourde (HTG)** ... rent, food, transit, today
- **25% USDC** ... stablecoin, inflation hedge, diaspora transfer
- **15% Lò (gold grams)** ... long-term store of value

> *The worker becomes a currency-diversified sovereign.*

Slide 15. Year 5 Numbers

Conservative base case. Phase 1 capital deployed.

- **$8.58M annual revenue**
- **$4.67M EBITDA** ... 54% margin
- **Month 9-12 break-even** in Phase 0
- **300+ full-time cooperative jobs** Cap-Haïtien
- **$3.2M/year** returned to gold reserve

> *Fifty-four percent margin is not a tech margin. It is a vertical integration margin.*

Slide 16. Year 3 Unlock

Phase 0 audit passes. Phase 1 opens.

- IFC Bogotá / FMO / Proparco capital close
- **$10-15M** Series Seed-equivalent, non-dilutive preferred

- 25,000 ha reforestation target funded
- Plakèt regional expansion (Cap-Haïtien → Gonaïves → PAP)
- Impact 480 stewardship seat perpetual

> *Phase 1 is not a pivot. It is the reward for surviving Phase 0.*

Slide 17. Year 20 Vision

Theta < 0.20 in the Cap-Haïtien cooperative footprint.

- 25,000 hectares reforested, 6 revenue streams, carbon positive
- 4,000+ cooperative jobs, diaspora reverse-migration
- Plakèt = national commerce rail
- Gold reserve > $120M, distributed to members
- BARSS framework validated as replicable

> *The only development model where the math gets better every year.*

Slide 18. Violence Avoidance

Not marketing. A product benefit.

- Surin $\rho = 0.95$ homicide persistence in Haiti
- Cash-out infrastructure = kidnapping risk
- USDC + Lò + Plakèt = no physical cash, no queue, no target
- Cooperative payroll skips the ATM entirely
- Worker never carries more than 60% gourde

> *We sell a paycheck that cannot be robbed in transit.*

Slide 19. Captive Demand

This is the quote that closes every investor call.

> *"We don't need VC. We have Dan's relationships and our own ventures as Day 1 customers. Three hundred users exist before we launch. Four hundred by Month 6. We are not building a marketplace. We are formalizing one."*

- No CAC
- No cold outreach
- No chicken-and-egg
- Just turn on the rails

Slide 20. The Firewall Principle

Five legally distinct entities. No cross-contamination.

- **SAKALA Community Center** … Haitian NGO, untouchable

- **Fatraka** … Pratik personal waste business
- **Impact 480 LLC** … Dan's host vehicle for JV
- **BARSS LLC** … Wesley's research + JV counterparty
- **Fon Kominote** … gold reserve trust

> *If one entity is attacked, the other four keep operating.*

Slide 21. The Ask

We are not asking for charity. We are asking for ignition fuel.

- **$50-75K Phase 0 bridge** … 36-month runway, 2 co-founders
- **Multi-year partnership** … not a one-off grant
- **Joint LOI** … co-signed by BARSS + Impact 480
- **Warm intros** … IFC Bogotá, FMO, Proparco for Phase 1
- **Validator endorsements** … Darity, Craemer, Volcy already in

> *Fifty thousand dollars buys thirty-six months of Haiti's first extraction-proof cooperative.*

Slide 22. Closing Slide

This is a security program funded by infrastructure revenue.

Come build it.

- Dan Tillias, Impact 480 LLC, Cap-Haïtien
- Wesley Bertil, BARSS LLC, Delaware
- Perpetual partnership. No exit. No drift.
- Phase 0 ignites Month 0.

> *"Dan and Wesley form a perpetual Delaware LLC that saves Haiti."*
>
> *Everything else is footnotes.*

End of Section 6. Mission Deck ready for live pitch, investor deck export, or Loom walkthrough.

Audience One-Pagers

Section 7: Audience-Specific One-Pagers

> *Five tailored versions of the Phase 0 story. Same facts, different frame. Each ends with a specific ask.*

7.1 For Foundations (Kellogg, Ford, Rockefeller, Open Society, IAF)

WHAT IF THE REPARATIONS CONVERSATION PRODUCED OPERATING INFRASTRUCTURE, NOT REPORTS?

The premise. Two decades of Caribbean philanthropy has funded an extraordinary volume of research, convenings, and advocacy on extraction, racial wealth gaps, and reparative justice. What it has not funded is operating infrastructure inside the places being researched. The BARSS Operations joint venture between Wesley Bertil (BARSS, CNHRR technical designation) and Daniel Tillias (SAKALA, 23 years on the ground in Cite Soleil) closes that gap. We are not proposing another research fellowship. We are proposing a 36-month Phase 0 runway that hardens four operating pillars into audited infrastructure, after which the same capital stacks that built Solengy can take over.

Phase 0 in one paragraph. Two founders, 36 months, four pillars (Waste-to-Wage / Plakèt Payroll / Almanac + Fon Kominote / BARSS Analytics), bootstrapped from a $50-75K bridge into real 2027 revenue. We are not building a flagship. We are building the dullest possible thing: a payroll rail that pays youth weekly, an offtake contract that turns organic waste into biochar, a cooperative savings almanac that allocates a Fon Kominote (Community Fund) to physical gold on a quarterly cadence, and a forensic analytics shop that sells extraction tracing to institutional clients at market rate (while offering the HELP Rate, a 90 percent discount, to Haitian-led organizations). By Month 36 we will have audited financials, three captive customers, and a Phase 1 stack request to IFC / IDB Invest / CDB.

Why us specifically. Wesley carries the CNHRR (National Commission for Haitian Repatriates and Repairs) technical designation, the EEDTM framework validated across 20 cases and $8-12T in documented extraction, and the BARSS research corpus (Haiti Case #1, Royal Caribbean Case #27, Philadelphia Case #21, WA State, NJ). Dan carries 23 years of SAKALA, 25 sites, 310 youth across 7 departments, and a trust position inside Cite Soleil that no foreign NGO can manufacture. The joint venture is structured as a Perpetual Partnership (steward-ownership, Impact 480 LLC as US counterparty, Fatraka as Haiti-side vehicle, firewall from SAKALA Community Center). The 40/40/20 split between founders / Fon Kominote / reinvestment is not rhetoric. It is on the operating agreement.

Why this is fundable for a foundation. The Fon Kominote allocation (40 percent of net to a community-owned fund, converted quarterly to allocated gold) gives program officers a real cooperative mechanism to point to, not a branded NGO. The HELP Rate service line (forensic analytics delivered at 90 percent discount to Haitian-led organizations) gives foundations a way to fund research capacity inside the region. The audited path to Phase 1 ($10-15M blended capital, same template as IFC's March 2025 Solengy close) gives foundations a visible exit toward concessional finance. And the steward-ownership structure means no one can buy the infrastructure out from under the community. Patagonia Purpose Trust parallel, minus the apparel.

Specific ask. We are requesting an introductory call (45 minutes) to walk through Phase 0 operating math and the Phase 1 IFC / IDB Invest pathway. Based on that call, we would explore a joint Letter of Inquiry to Kellogg (Community Voice track) or Ford (BUILD track), $500K-1M per year across three to five years, with possible co-funders at Rockefeller, Open Society, and IAF. The HELP Rate service line can be structured as a separate track. Email: wesleybertil@gmail.com. Haitian co-signer: Daniel Tillias, SAKALA.

7.2 For Infrastructure Financiers (IFC, IDB Invest, Canada BCF, GCF, CDB)

WE ARE THE SOLENGY FOR WASTE + PAYMENTS + CERTIFICATION. SAME CAPITAL STACK, DIFFERENT OUTPUT.

The thesis. In March 2025, Ivy Kuperberg's desk at IFC closed Solengy (Haiti solar microgrid) on a blended senior-plus-subordinated-plus-grant structure under Haiti country risk conditions. We are the same template, different output. Where Solengy monetizes photons, BARSS Operations monetizes three underpriced Haitian flows: organic waste (into biochar + gold-pegged vendor payments), informal payroll (into audited Plakèt rails), and workforce credentials (into UHPC / bamboo / kiln certifications tied to a mini-rail spine). Phase 0 is the 36-month audit generator. Phase 1 is the $10-15M close. Full build is the $128-208M Cap-Haïtien Transformation Plan.

Phase 0 as risk reduction. The 36-month bootstrap does three things that matter to a credit committee. First, it produces three years of audited financials across four revenue lines without a single dollar of IFI capital, proving cash discipline under Haiti conditions. Second, it locks in three captive customers (SAKALA payroll, HELP Haiti-side payroll, first offtake contract) plus the anchor Royal Caribbean food-waste stream, giving you customer concentration you can actually diligence. Third, it produces the Fon Kominote gold-allocated reserve (target 19.2kg / $1.87M by Y5 on SAKALA's own run) as visible on-chain proof the cooperative dividend mechanism is real, not aspirational. When the Phase 1 deck lands on your desk in Month 24-36, the risk profile looks like a scaling infrastructure play, not a pilot.

The Cap-Haïtien Transformation Plan. The full 19-section architecture ($128-208M) stacks on one UHPC (Ultra-High-Performance Concrete) slab in the Cap-Haïtien corridor: waste logistics (rickshaw + mini-truck + barge), a 42km mini-rail spine (Limonade - Cap - Labadee), solar + biogas energy microgrid, flood retention swales tied to coastal reclamation, potable water kiosks, a Plakèt Pay vendor payroll rail, a workforce certification academy (UHPC caster, kiln operator, bamboo joiner, rail mechanic, payments agent), a trust-anchored community land trust, and Fon Kominote cooperative ownership structured as perpetual. Phase 1 ($10-15M) funds the first node: one waste depot, one kiln cluster, one rickshaw fleet, one rail survey, and the payroll spine going live for 500-1,000 vendors.

Capital stack mirror to Solengy. Senior debt (IFC or IDB Invest, 40-50 percent, 10-12 years), subordinated debt (CDB or Canada BCF, 20-25 percent, 15 years, concessional), first-loss grant wrap (GCF climate window + foundation co-funders, 15-20 percent), sponsor equity (BARSS Ops + diaspora + RCL restitution component, 10-15 percent). Same officers, same desks, same country-risk memos. The only thing new is the revenue model and the steward-ownership overlay. We have already mapped the term sheet to Solengy's structure and can walk your team through it line by line.

Specific ask. We request a Month 18 progress update (a 30-minute call with the Haiti country team and the climate / blended finance desk), at which point Phase 0 will have produced 18 months of audited data and the Cap-Haïtien feasibility study will be in draft. A Phase 1 Letter of Intent conversation is targeted for Month 24-36. In the interim, if there is a Solengy-style pipeline review or a Haiti investor call we should be staged into, that is the right first step. Contact: wesleybertil@gmail.com.

7.3 For Royal Caribbean / Corporate Restitution

YOU HAVE A $15-30B PROBLEM (CASE #27). WE HAVE THE CONSTRUCTIVE PATH.

The situation. The Brattle-format BARSS forensic report on Royal Caribbean Ltd (Case #27, filed as `BARSS_Report_Royal_Caribbean_Case27.html` in the BARSS vault, with companion `_Restitution_Package.html`) quantifies a $4.4B-$72.3B exposure window tied to Labadee, port concessions, and decades of value capture from a Haitian coastal enclave under conditions that, under the EEDTM framework, cluster around the direct-extraction Theta regime (~0.85) and a Gamma differential that would not survive disclosure. The math is done. The filings are drafted. We are not the hostile counterparty. Dan Tillias has known the RCL president personally for 20 years. We are offering the constructive path before the litigation path.

Phase 0 as the anchor opportunity. Our 36-month Phase 0 bootstrap is already running on a $50-75K bridge across four pillars. RCL's participation would do three things at once. First, a 100-200 ton per year organic waste offtake from the Labadee food service stream (RCL's own waste, processed by Haitian youth at the BARSS Ops kiln, converted to biochar and cooking-grade briquette that displaces wood charcoal inside Cite Soleil). Pricing: $2-5M per year in offtake + logistics fees. Second, a one-time restitution contribution of $5-10M structured as a founding grant into the Fon Kominote, publicly disclosed, audited, steward-locked. Third, a long-form ESG narrative that writes itself: RCL food waste, processed by Haitian youth, displaces wood charcoal in the world's most deforested country, paid via cooperative payroll rails, captured in a community-owned gold reserve.

The dual track is the whole point. We are running two tracks in parallel. Track A is Sovereignty: Labadee is reframed from a fenced enclave into a partnership node, anchored by the offtake contract, the restitution fund, and a published reconciliation framework co-authored by Dan and RCL. Track B is Litigation: Case #27 is filed into the record if no constructive path materializes by the Phase 1 close window (Month 24-36). The Brattle report is done either way. The only variable is whether RCL is named as a defendant or cited as a founding restitution anchor. That choice belongs to RCL.

Why this is the cheapest exit RCL will ever get. The Case #27 exposure starts at $4.4B. The constructive package starts at $15-25M over 36 months, fully deductible, fully reportable, and structurally impossible to reverse or extract (steward-ownership lock). Every comparable extractive tourism dispute of the last decade has cost the respondent more in legal and reputational terms than the settlement itself. Dan's 20-year relationship with the RCL president is the opening channel. The Brattle report is the specification document.

Specific ask. We request a private 30-minute call between Daniel Tillias (SAKALA) and the RCL president, at the RCL president's calendar convenience, with Wesley Bertil on call as technical lead. The agenda is one item: walk through the Case #27 report, walk through the constructive package, and decide on track. If RCL chooses the constructive track, we are prepared to structure the offtake contract and the Fon Kominote anchor grant within 90 days. Email for scheduling: wesleybertil@gmail.com. Dan direct for the relationship channel.

7.4 For HELP + UWI / Academic Partners

YOUR GRADUATES BECOME THE WORKFORCE THAT EARNS CREDENTIALS DEPLOYING HAITI'S FIRST COOPERATIVE DIGITAL PAYMENT INFRASTRUCTURE.

The premise. Haitian Education and Leadership Program (HELP) has spent two decades producing Haiti's next generation of professionals. The University of the West Indies (UWI) Centre for Reparation Research, under Stanley Niaah, has led the Caribbean's scholarly response to extraction and repair. BARSS Operations offers both institutions an operational counterpart: a place where graduates become the workforce that builds and runs Haiti's first cooperative digital payment infrastructure, and where reparations research becomes tested against an operating ledger, not an archive.

Phase 0 integration from Day 1. HELP's Haiti-side staff payroll is the third captive Plakèt Payroll customer from the first month of Phase 0 operations (after SAKALA and BARSS internal staff). That means HELP staff are paid weekly, on-rail, with full audit trail and Fon Kominote opt-in, from the day we go live. In parallel, HELP alumni are the first cohort into the rickshaw-build and kiln-operator certification programs, earning UHPC and bamboo-joinery credentials that tie directly to the Cap-Haïtien Transformation Plan workforce pipeline. Conor Bohan's 4/15 introduction to Caroline Bernal-Silva is already in motion, and the first operational deployment conversation is on the calendar.

UWI and the Applied Extraction Economics program. Stanley Niaah at UWI-Mona has been in active research partnership with BARSS since November 2025. The joint venture enables the Applied Extraction Economics program: a UWI-hosted teaching track that uses the EEDTM framework as its quantitative spine, staffed by BARSS research fellows, with case studies drawn from Cases #1 through #27. Wesley's SALISES PhD pathway is the personal pipeline. The CARICOM Reparations Commission, via UWI, gains a technical research arm that produces filings, not papers. Marla Dukharan and Sir Ronald Sanders are already in the conversation.

The BARSS HELP Rate service tier. BARSS Analytics, the fourth Phase 0 pillar, sells forensic extraction tracing to institutional clients at market rate ($15-50K per engagement). Every paid engagement cross-subsidizes the HELP Rate: the same analytical depth, delivered at 90 percent discount, to Haitian-led organizations and Caribbean academic institutions. HELP, UWI-CRR, CNHRR, IJDH, and CEPR are charter HELP Rate partners. This is how research capacity gets built inside the region without waiting for a foundation cycle.

Why the structure matters to an academic partner. The steward-ownership lock (Perpetual Partnership, Impact 480 LLC as US counterparty, Fatraka as Haiti-side, 40/40/20 split) means the infrastructure your graduates help build cannot be sold, diluted, or extracted. The Fon Kominote allocation is the teaching example: a cooperative dividend mechanism that real students can deploy into, measure, and publish on. The whole system is engineered to be studied.

Specific ask. We request a Conor Bohan + Caroline Bernal-Silva + Wesley Bertil + Daniel Tillias working trip to Haiti (3 days, Port-au-Prince and Cap-Haïtien), target window Month 3-6 of Phase 0, with two deliverables: (1) Plakèt Pay deployed to the first 100 HELP Haiti-side vendors and staff, live on the rail, and (2) a signed MOU covering the HELP workforce pipeline into the certification cohorts. In parallel, a UWI-CRR meeting (Stanley Niaah, Wesley, Dan, Marla Dukharan) to finalize the Applied Extraction Economics program term sheet. Contact: wesleybertil@gmail.com.

7.5 For Diaspora Investors / Family Offices

STEWARD-OWNED. PERPETUAL. YOU CAN'T BUY OR SELL THIS. YOU CAN FUND THE FIRST 36 MONTHS AND WATCH YOUR CAPITAL DO WORK NOTHING ELSE IN HAITI DOES.

The honest frame. This is not a venture investment. There is no exit, no dilution, no equity extraction, no liquidity event. The joint venture is structured as a Perpetual Partnership (steward-ownership, Impact 480 LLC, Fatraka, Patagonia Purpose Trust parallel from Yvon Chouinard's 2022 restructure). Your capital funds infrastructure that will outlive both founders and cannot be acquired, sold, or converted. If that is the wrong frame for you, stop here. If that is the whole point, keep reading.

Phase 0 in plain numbers. $50-75K bridge, 36 months, two founders, four pillars. Specific deployment: rickshaws (organic waste collection across Cite Soleil and Cap-Haïtien), kilns (biochar and charcoal briquette from collected waste), bamboo (workforce credentials and structural material supply), and Plakèt MVP (the weekly vendor and youth payroll rail, live by Month 6). Every dollar is tied to a unit of output: one rickshaw, one kiln run, one bamboo training cohort, one hundred Plakèt vendors on-rail. The operating discipline comes from the fact that there is no cushion. If it does not work on $50-75K across 36 months, it does not scale on $10M across 10 years.

Why this is different from every other Haiti ask. The Fon Kominote (Community Fund) is the structural answer to 200 years of extraction. Forty percent of net operating margin is allocated quarterly to a gold-denominated reserve, owned by the SAKALA cooperative structure, held in audited custody, and disbursed to youth cohorts and community infrastructure on a published schedule. On SAKALA's own run-rate math, the Fon hits 19.2kg of allocated gold (~$1.87M at current spot) by Year 5. That is visible proof the mechanism works. You can watch it accumulate. You can audit the custodian. You can ask any youth member what their share is. This is the first Haitian cooperative where the cooperative dividend is denominated in a non-dilutable asset.

Captive customer coalition. The economics do not rely on paid marketing, viral growth, or VC-speed customer acquisition. Day 1 customers are SAKALA payroll, HELP Haiti-side payroll, and the first offtake buyer. Royal Caribbean's food waste stream is the restitution anchor (Section 7.3). The certification cohorts feed directly into the Cap-Haïtien Transformation Plan Phase 1. Every customer is pre-committed or close to it. You are funding the 36-month period during which the captive coalition becomes the audited P&L that unlocks the $10-15M Phase 1 IFC / IDB Invest close.

What your $5-25K check buys. A 3-year engagement, quarterly operating updates (real financials, real units, real audit trail), a named cohort or kiln or rickshaw fleet, a seat at the annual Harvest Day gathering in Cite Soleil or Cap-Haïtien, and the knowledge that your capital is inside the only steward-owned extraction-proof infrastructure in the Caribbean. You will not get equity. You will not get a return. You will get a receipt, a Fon Kominote acknowledgement, and 36 months of evidence that another way is possible.

Specific ask. A $5K-25K check into the Phase 0 bridge, structured as a 3-year engagement letter (no equity, no convertible, no return mechanism beyond Fon Kominote acknowledgement and annual reporting), plus a commitment to refer two other diaspora investors or family offices into the round. Target close: $50-75K total across 10-15 checks. Contact: wesleybertil@gmail.com. Haitian co-signer: Daniel Tillias, SAKALA.

Section 7 of the Pratik x BARSS Ops Launch Brattle Portfolio. Phase 0 anchor in every one-pager. Specific ask at every close. No em-dashes.

8.10 Uncertainty, Estimates, and BARSS-Internal Flags

Wherever this Brattle presents a number that is not directly published by a named third-party dataset, that number is labeled as a **BARSS internal estimate** in the section where it appears, and its derivation is shown either in the body text or in an explicit synthesis note in the relevant Plakèt Research document.

The following Brattle figures are **BARSS internal estimates** (not taken from any single external publication):

1. Security-premium-per-vendor range ($225-480/mo) — synthesized from UN Habitat 2022, GI-TOC qualitative, and BARSS vendor interviews (see §8.2).
2. Haiti domestic commerce cash-fabric mid-estimate ($8-14B) — synthesis of IMF WEO, World Bank WDI, ILO informal-economy share.
3. Plakèt revenue model unit economics — built from the five Plakèt Research docs §1-5, not from any published competitor operating data in Haiti (there is none; MonCash is black-box).
4. Diaspora ZIP / church database (1,420 / 1,604) — BARSS outreach scrape, not a published dataset.
5. Gold Trust allocation curve (Yr 5-7 build, Yr 8-10 harvest) — internal model tied to the SAKALA/TapTap Harvest Box v4 financial model.

All other numbers in this Brattle are traceable to one of the external sources cited in §8.1 through §8.7, or to a signed-partner document catalogued in §8.8.

> *[!success] Verification Any reader wishing to independently verify a claim should: 1. Locate the claim in the relevant Brattle section (§1-§7). 2. Find the matching row in §8.1-§8.7 above. 3. Open the URL or the vault path listed. 4. For partner-status claims, cross-check §8.8 against MEMORY.md and the Gmail message IDs listed. 5. For deep context, follow the §8.9 index to the source research folder.*

Section 8. Data + Citations Appendix — Pratik × BARSS Ops Launch Brattle Portfolio — compiled 2026-04-16.

Contact & The Ask

Section 9: Contact, The Ask, and Next Steps

Pratik × BARSS Ops Launch Brattle Portfolio

9.1 The Ask… Phase 0 Bridge Capital

$50,000 to $75,000 from a mix of bridge investors, diaspora family offices, and mission-aligned angels. This is not a Phase 1 capital raise. This is the ignition capital that gets two people through 36 months of executing four pillars in a single Haitian commune.

What this bridge specifically ignites:

- **4 to 6 rickshaws** (Play 1, Certification Tracks #3 and #11). Collection coverage across the SAKALA service radius, Month 2 through Month 4 deployment.
- **2 to 3 biochar kilns plus one briquette press** (Play 3, Certification Tracks #10 and #1). Charcoal substitution line live by Month 3.
- **0.5 hectare bamboo starter plot** (Play 2, SAKALA × Jupille × BambouFacile). Planted Month 3, harvest-ready Year 3.
- **Plakèt MVP engineering** (Play 4). Next.js plus Supabase plus Base chain plus Mannitaks integration. Ship to first captive customer (SAKALA payroll) by Month 2.
- **1,000 to 2,000 household bin sets** (Play 1 adoption infrastructure). Distributed Month 3 onward.
- **Protected supervisor team stipends**. Gilbert, Guy, and Other Wesley at $1,200 per month each. These three are Dan's operational spine.
- **15 months of runway** to the Month 9 through Month 12 break-even crossover where Plakèt revenue covers operating burn.

Every dollar in Phase 0 is traceable to a unit of physical or digital infrastructure that produces cashflow or carbon or training credit.

9.2 What Each Audience Gets If They Engage Now

- **Foundations.** Joint LOI track (Ford, Open Society, Inter-American, Kellogg), HELP Rate service partnership documentation, status as a founding mission-aligned cooperative infrastructure partner at Phase 0 pricing.
- **Infrastructure financiers.** Visibility into Phase 1 deal pipeline (Year 3 onward, $10 to $15M), Solengy-proven capital stack template as precedent, first-look on co-invest rights.
- **Royal Caribbean.** A constructive restitution path that materially de-risks Case #27 exposure ($15 to $30B documented). A channel to redirect capital into operating infrastructure rather than settlement reserves.
- **HELP plus UWI.** Workforce pipeline through the 12 certification tracks, SALISES PhD pathway for Wesley that keeps research output academically anchored, CARICOM Reparations Commission methodological alignment.
- **Diaspora investors.** First position in Phase 0, Patagonia Purpose Trust structural parallel (steward-owned, perpetual), K-1 distributions post-break-even.

9.3 90-Day Action Calendar

What we commit to execute in the first 90 days after engagement:

- **Month 1.** JV Operating Agreement executed between BARSS LLC and Impact 480 LLC. EIN issued. Mercury account funded. First Plakèt Payroll captive customer signed (SAKALA Community Center, 37 staff).
- **Month 2.** Plakèt MVP live on Base chain with Mannitaks integration. Limonade site prep complete. Rickshaw-build cohort recruited (6 trainees, Certification Track #3). First biochar kiln commissioned and fired.
- **Month 3.** First household bin distribution (1,000 units minimum). MOU signed with Mayor Angie Bell. Plakèt Verified flow live. Bamboo starter plot planted on 0.5 ha.

Milestones are binary. They either happen or they do not. Quarterly reporting begins Month 4.

9.4 Deliberate Non-Asks

What we are **not** asking for, and why this matters:

- **Not seeking equity dilution.** Steward-owned structure, perpetual term, no exit. Wesley and Dan are locked 50/50 for the life of both partners.
- **Not seeking voting control.** Governance is closed. Bridge capital receives economic participation, not governance seats.
- **Not seeking brand co-ownership.** The Fon Kominote SAKALA master brand stays distinct from SAKALA NGO. Neither is for sale.
- **Not seeking immediate Phase 1 capital.** The $10 to $15M infrastructure round is a Year 3 conversation after Phase 0 has produced proof. Do not confuse the two.
- **Not asking SAKALA existing funders** (Indriy, E Power, Middle Knight, Nancy Young) **to re-paper**. The firewall between SAKALA NGO and Impact 480 LLC is preserved intentionally. Existing relationships are untouched.

9.5 Contact Block

Wesley Bertil Principal, BARSS LLC Secrétaire Technique, CNHRR US Support Committee 103 Silverside Rd, Wilmington, DE 19809 267.882.6178 wbertil@barssforhaiti.com

Daniel Tillias Principal, Impact 480 LLC Executive Director, SAKALA Community Center Board Co-Chair, SOIL Haiti (Introductions routed through Wesley)

9.6 How to Read This Document

- **§1** for the executive overview
- **§2** for diagnosis and architecture
- **§3** for operational detail on the four plays
- **§4** for financial model and Phase 0 bootstrap numbers
- **§5** for the 20-year trajectory and partner coalition
- **§6** for the Mission Deck (slide-ready)
- **§7** for the audience-specific one-pager relevant to your role
- **§8** for data and citations (verification layer)
- **§9** (this section) for the ask and next steps

9.7 Closing

Phase 0 is 36 months of two people executing four pillars in a Haitian commune. The math of what we inherit if this works… Cap-Haïtien 2046, Theta below 0.20, a cooperative infrastructure that outlives BAM BAM… justifies the work. We are not looking for everyone. We are looking for the right few. If after reading this document you see yourself as one of those few, the next move is the first call.
